

Many bugs build their homes beneath our feet and spend their days scurrying through networks of underground tunnels.

Mole crickets

During the mating season, male mole crickets dig special sound chambers, which increase the volume of their songs.

Powerful legs are essential for digging.

A male mole cricket chirps inside his sound chamber.

Female mole crickets hear the loud chirping sounds and are enticed into the chamber.

Mole crickets spend most of their lives in networks of underground tunnels.

The pupae of many bugs live underground.

Pupa

Burrowing bugs

Many invertebrates live and spend time hidden underground. They might not wear hard hats, but these bugs can dig holes as well as any construction worker!
