

In the delicate balance of nature, every creature plays its own important role.

Recycling enthusiasts

Nature's cleanup crew takes waste materials and reuses them for food. Dead animals, plants, and poop would become a real problem without bugs and their relatives.

Pest controllers

Predatory bugs keep many pest species under control by eating them, so that they don't destroy our crops.

Ladybug eating an aphid

Pill millipede feeding on rotting wood

Nature's gardeners

Below ground, bugs and their relatives prepare the perfect soil to help plants grow. Their poop acts as a fertilizer, and they make tunnels that allow water and air to reach growing plant roots.
