

TALL KANGAROO PAW
Anigozanthos flavidus
F: Haemodoraceae

From sandy areas of S.W. Australia, this species gets its common name from the appearance of its woolly-haired flower buds.

3 m
10 ft

COMMON WATER HYACINTH
Pontederia crassipes
F: Pontederiaceae

Native to Amazonia, this floating plant is a major tropical pest, but can be used to absorb pollution.

PICKEREL WEED
Pontederia cordata
F: Pontederiaceae

Fast-growing and with striking blue flowerheads, this water-edge species is common from eastern N. America south to Argentina.

1 m/3¼ ft

PENDULOUS SEDGE
Carex pendula
F: Cyperaceae

Like other true sedges (genus *Carex*), this European species has triangular stems and separate male and female flower clusters.

1.4 m
4½ ft

QUEEN OF THE ANDES
Puya raimondii
F: Bromeliaceae

Native to the C. Andes, the world's largest bromeliad produces a single colossal flower spike after many years' growth and then dies.

CHINESE WATER CHESTNUT
Eleocharis dulcis
F: Cyperaceae

Native to Asia, this wetland sedge has clumps of tubular stems. It is cultivated for its edible underwater tubers.

5 ft

5 m/16 ft

PAPYRUS SEDGE
Cyperus papyrus
F: Cyperaceae

This tall African perennial is a wetland plant. The Ancient Egyptians wrote on a paper-like material called papyrus made from its leaves.

ZEBRA PLANT
Aechmea chantinii
F: Bromeliaceae

This large, strap-leaved epiphytic bromeliad comes from the rainforests of S. America. It is pollinated by hummingbirds.

HAHN'S CATOPSIS
Catopsis paniculata
F: Bromeliaceae

This epiphytic bromeliad is native to the cloud forests of S. Mexico and C. America.
