**GREEN
BOTTLEBRUSH**
Melaleuca virens
F: Myrtaceae

Resisting snow, frost, and drought, this sprawling subalpine shrub from Tasmania has leaves with sharp, pointed ends. It attracts birds and butterflies.

**TONGHI
BOTTLEBRUSH**
Melaleuca subulata
F: Myrtaceae

A spreading shrub with small, woody fruits containing hundreds of seeds. It is found mainly in New South Wales and Victoria, Australia.

RED GUM
Eucalyptus camaldulensis
F: Myrtaceae

Widespread in Australia, with smooth, pale bark and blue-green leaves, this riverside tree has durable timber and its nectar makes good honey.

5 m
16 ft

COMMON MYRTLE
Myrtus communis
F: Myrtaceae

Native from the Mediterranean to Pakistan, myrtle produces fragrant flowers and blue-black berries. Its aromatic leaves yield essential oils.

15 m
50 ft

CHILEAN MYRTLE
Luma apiculata
F: Myrtaceae

This slow-growing tree has a contorted trunk and smooth grey-orange peeling bark. Its fruit is a black berry.

POHUTAKAWA
Metrosideros excelsa
F: Myrtaceae

Native to North Island, New Zealand, this tree produces red flowers in December. Old trees have beard-like masses of hanging aerial roots.

**TASMANIAN
SNOW GUM**
Eucalyptus coccifera
F: Myrtaceae

With grey-white bark, peeling in long strips to reveal a creamy-white trunk, this species of Tasmanian uplands has unstaked, opposite leaves.

ALLSPICE
Pimenta dioica
F: Myrtaceae

From the Caribbean, S. Mexico, and C. America, this unisexual tree has small, white flowers that form brown, berry-like stoned fruits. Unripe fruits are dried and ground to make "allspice".

3 m
10 ft

SCARLET KUNZEA
Kunzea baxteri
F: Myrtaceae

Kunzea species are unusual in having colourful stamens much longer than their petals, which adds to the showy appearance that attracts pollinating birds.

20 m
65 ft

CLOVE
Syzygium aromaticum
F: Myrtaceae

The dried flower buds of this native of Indonesian islands are used as a spice. Its cream-coloured flowers have red stamens and ripen to purple, single-seeded berries.

36 m
120 ft

CIDER GUM
Eucalyptus gunnii
F: Myrtaceae

This hardy Tasmanian tree forms juvenile leaves that are round and silvery, maturing to scythe-shaped and blue-grey. It is used in paper production.

12 m
40 ft

**URN-FRUITED
GUM**
Eucalyptus urnigera
F: Myrtaceae

This tree from S.E. Tasmania has urn-shaped fruits, blue-grey juvenile leaves, and white flowers in clusters of three with numerous stamens.

EDIBLE FRUIT

GUAVA
Psidium guajava
F: Myrtaceae

This tree from tropical and subtropical America has flaky, coppery bark. The fruits have a sweet, musky smell when ripe, and contain numerous hard, yellow seeds.
