LEAFEIGHT-PETALLED
FLOWER**MOUNTAIN AVENS***Dryas octopetala*
F: Rosaceae

The flowers of this Arctic and mountain undershrub turn to follow the sun to warm their centres and attract pollinating insects.

25 m
80 ft**WILD SERVICE TREE***Sorbus torminalis*
F: Rosaceae

This rare tree grows in ancient woods in Europe, Asia Minor, and N. Africa. Its name is derived from the brew, *cerevisia*, made from its fruits.

1 m
3¼ ft**COTONEASTER**
Cotoneaster horizontalis
F: Rosaceae

This creeping Chinese shrub is commonly grown in gardens for its flowers and fruits, and occasionally escapes. The semi-evergreen leaves form flattened clumps.

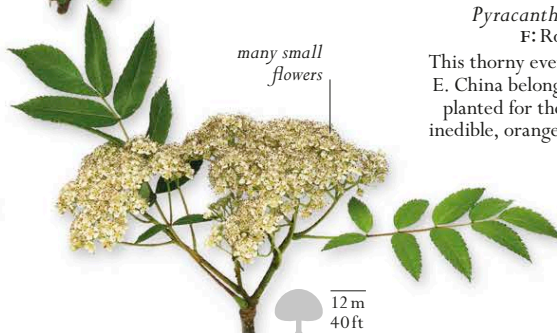

3 m/10 ft

**FIRETHORN***Pyracantha rogersiana*
F: Rosaceae

This thorny evergreen shrub from E. China belongs to a genus often planted for their attractive but inedible, orange, berry-like fruits.

EDIBLE
FRUITSWHITE OR PINK
FLOWERS**BLACKBERRY**
Rubus fruticosus
F: Rosaceae

Familiar in Europe as scrambling hedgerow bushes bearing edible fruits in autumn, blackberries form a group of very closely related "microspecies".

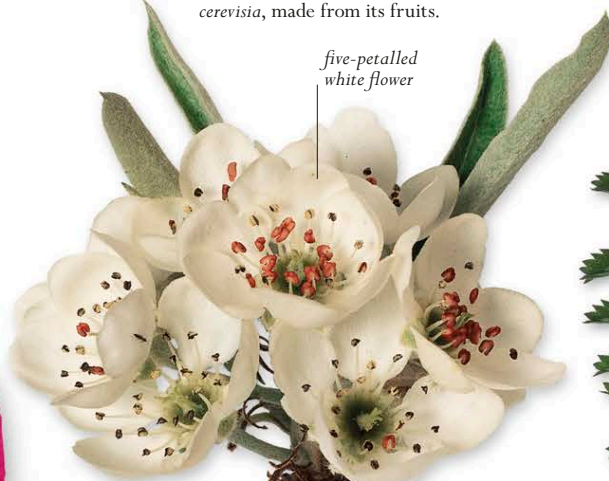

2.5 m
8 ftmany small
flowers**AMERICAN MOUNTAIN ASH***Sorbus americana*
F: Rosaceae

This deciduous woodland tree is native to eastern N. America. Its orange berries last into winter, providing food for thrushes and jays.
