

» SAPINDALES

CRABWOOD
Carapa guianensis
F: Meliaceae

The dark timber of this tropical S. American tree is sometimes sold as Brazilian mahogany. Soap is made from its seeds.

130 ft

RIPE FRUITS

NEEM TREE
Azadirachta indica
F: Meliaceae

Valued for its timber, medicinal oils, and edible shoots, this tree is grown throughout the Old World tropics. Indian farmers produce insecticides from the oil and leaves.

PINNATE LEAVES

CHINESE MAHOGANY
Toona sinensis
F: Meliaceae

Chinese people eat the leaves of this E. Asian tree as a vegetable. Furniture is made from its hard, reddish timber.

80 ft

SCENTED BORONIA
Boronia megastigma
F: Rutaceae

This erect shrub of wet sandy sites in W. Australia has bell-like flowers, brownish on the outside and golden-green inside.

2 m
6½ ft

FRINGED RUE
Ruta chalepensis
F: Rutaceae

A native of rocky habitats in S. Europe and S.W. Asia, this is thought to be the rue mentioned in the Bible.

23½ in

SYDNEY ROCKROSE
Boronia serrulata
F: Rutaceae

This small shrub, in a genus confined to Australia, grows in coastal heaths near Sydney. It has bright pink, cup-shaped flowers.

1.5 m
5 ft

MEXICAN ORANGE
Choisya ternata
F: Rutaceae

Originating from Mexico but common in gardens elsewhere, this irregular, bushy, evergreen shrub has branched clusters of sweet-scented, white flowers.

2 m
6½ ft

prominent midrib

HOP TREE
Ptelea trifoliata
F: Rutaceae

This small tree, native to eastern N. America, is grown for ornament. Its fruits were once used as a substitute for hops in brewing.

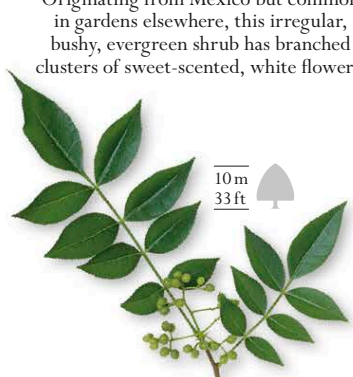

6 m
20 ft

SALMON CORREA
Correa pulchella
F: Rutaceae

A native of South Australia, this small shrub is grown in gardens for its delicate, pendulous, tubular flowers.

1 m 3/4 ft

COMMON PRICKLY ASH
Zanthoxylum americanum
F: Rutaceae

This spiny N. American tree grows as far north as Quebec, Canada. Native Americans chewed its bark to help soothe toothache.

10 m
33 ft

SKIMMIA
Skimmia japonica
F: Rutaceae

Much planted in gardens, parks, and amenity areas, this evergreen, aromatic shrub from E. Asia produces red berries in late summer.

2 m 6/10 ft

JAPANESE BITTER ORANGE
Citrus trifoliata
F: Rutaceae

The small, inedible yellow fruits of this spiny shrub resemble oranges with a downy skin. They have several medicinal uses.

RIPENING FRUIT

SEVILLE ORANGE
Citrus x aurantium
F: Rutaceae

Unlike the sweet orange we eat raw (*C. x sinensis*), this species' bitter fruits are only good for cooking. Both originated as Asian hybrids.
