

» LAMIALES

30 cm
12 in**BUGLE***Ajuga reptans*
F: Lamiaceae

Growing around Europe, N. Africa, and S.W. Asia, this woodland and meadow perennial produces its flower stems from far-creeping, rooting runners.

tubular flower with large, three-lobed lip

oval leaf, often bronzy underneath

6 m/20 ft

CHASTE TREE*Vitex agnus-castus*
F: Lamiaceae

Chaste tree grows in damp places from S. Europe to Pakistan. It was once thought to preserve chastity, and is used to regulate hormonal functions in herbal medicine.

ROUND-LEAVED MINT BUSH*Prostanthera rotundifolia*
F: Lamiaceae

This aromatic Australian shrub with circular leaves and pink to purple spring flowers grows in open forests from New South Wales to Tasmania.

**SAGE***Salvia officinalis*
F: Lamiaceae

This greyish shrub from S.W. Europe and the Balkans is widely cultivated for its pungent leaves, used to flavour foods.

60 cm/23½ in

JERUSALEM SAGE*Phlomis fruticosa*
F: Lamiaceae

Native to dry rocky habitats in the E. Mediterranean, this evergreen shrub with grey-felted leaves is a widely grown garden ornamental.

40 cm/16 in

COMMON THYME*Thymus vulgaris*
F: Lamiaceae

Native to dry rocky places in the W. Mediterranean, this densely branched shrub is used as a culinary herb, and an ingredient in perfumes and soaps.

2 m/6½ ft

ROSEMARY*Salvia rosmarinus*
F: Lamiaceae

From dry Mediterranean habitats, the oils in the leaves of this shrub reduce potential water loss from transpiration. Rosemary is a well-known culinary herb.

LATE SUMMER FLOWERS

BASIL*Ocimum basilicum*
F: Lamiaceae

Also known as sweet basil, this is an annual from India and Iran. In cultivation, its pungent leaves are used as a culinary herb.

EDIBLE LEAVES

80 cm
32 in**COMMON LAVENDER***Lavandula angustifolia*
F: Lamiaceae

This is another evergreen shrub of dry Mediterranean scrub habitats. The water-saving oils in its leaves are valued in perfumery.
