

1–1.2 cm
3/8–1/2 in

EUROPEAN TORTOISE BUG
Eurygaster maura
F: Scutelleridae

This bug feeds on a wide range of grasses but can sometimes be a minor pest of cereal crops.

1–1.6 cm
3/8–1/2 in

HAWTHORN SHIELD BUG
Acanthosoma haemorrhoidale
F: Acanthosomatidae

This attractive European species feeds on the buds and berries of hawthorn and occasionally other deciduous trees such as oak.

4 mm
3/32 in

COMMON FLOWER BUG
Anthocoris nemorum
F: Anthocoridae

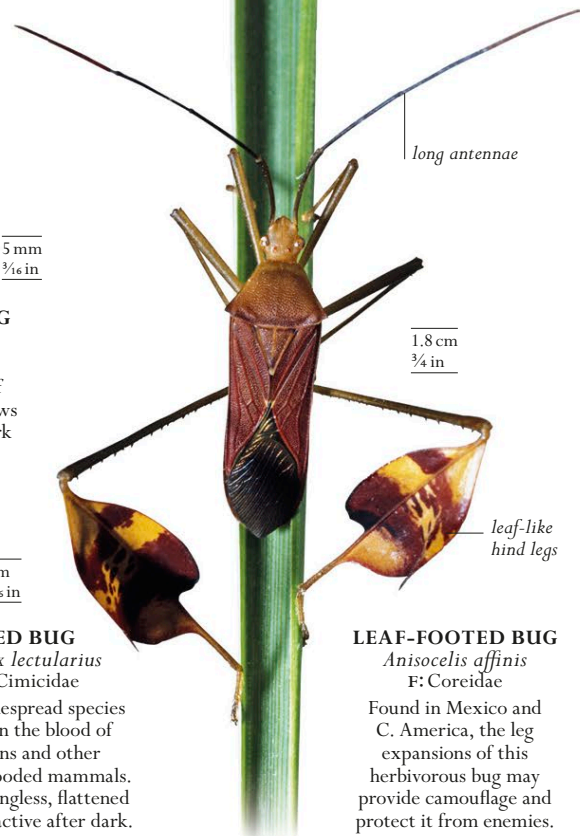

This predatory bug can be found on a wide range of plants. Despite its small size it can pierce human skin.

5 mm
3/16 in

BIRCH BARK BUG
Aradus betulae
F: Aradidae

The flattened body of this European bug allows it to live under the bark of birch trees, where it feeds on fungi.

long antennae

1.8 cm
3/4 in

leaf-like hind legs

LEAF-FOOTED BUG
Anisocelis affinis
F: Coreidae

Found in Mexico and C. America, the leg expansions of this herbivorous bug may provide camouflage and protect it from enemies.

4–5 mm
3/32–3/16 in

BED BUG
Cimex lectularius
F: Cimicidae

This widespread species feeds on the blood of humans and other warm-blooded mammals. These wingless, flattened bugs are active after dark.

strong front leg

single sharp claw

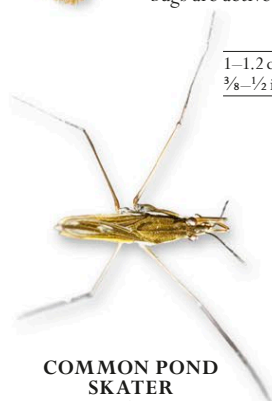

hair-fringed hind leg

pair of appendages acts as breathing siphon

8–10 cm
3 1/4–4 in

GIANT WATER BUG
Lethocerus sp.
F: Belostomatidae

Using its strong front legs and toxic saliva, this tropical bug can overpower larger vertebrate prey such as frogs and fish.

1–1.2 cm
3/8–1/2 in

COMMON POND SKATER
Gerris lacustris
F: Gerridae

Widespread and immediately recognizable as it darts about on the surface of water, the pond skater locates prey by the ripples it sends out.

8–15 mm
3/16–3/5 in

WATER BOATMAN
Corixa punctata
F: Corixidae

Using its powerful, oar-like rear legs for swimming, this common European species feeds on algae and detritus in ponds.

8–11 mm
3/16–1/2 in

TOAD BUG
Nerthra grandicollis
F: Gelastocoridae

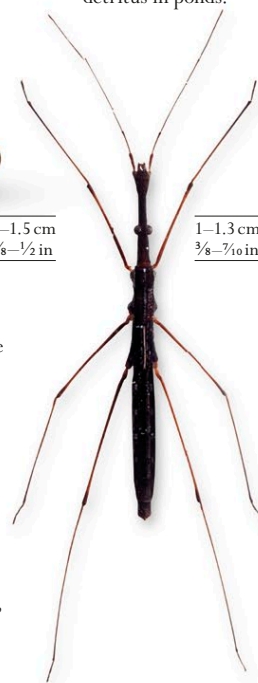

The warty surface and drab colouring of this African bug allow it to hide in mud and debris, where it ambushes insect prey.

1–1.5 cm
3/8–1/2 in

SAUCER BUG
Ilyocoris cimicoides
F: Naucoridae

The saucer bug traps air from the surface under its folded wings and hunts prey in the shallow margins of lakes and slow rivers. This species is from Europe.

1–1.3 cm
3/8–7/10 in

WATER MEASURER
Hydrometra stagnorum
F: Hydrometridae

This slow-moving European bug lives around the margins of ponds, lakes, and rivers and feeds on small insects and crustaceans.

6 mm
1/4 in

COMMON GREEN CAPSID
Lygocoris pabulinus
F: Miridae

This widespread bug can be a serious pest of a range of plants, including fruit crops such as raspberries, pears, and apples.
