

**GREEN
POISON-DART FROG**
Dendrobates auratus

The males of this species fight to secure a territory. The male defends the eggs and, when they hatch, carries tadpoles to small pools in bromeliads.

2.5–6 cm
1–2¼ in

**YELLOW-BANDED
POISON-DART FROG**
Dendrobates leucomelas

Found in wet forests of northern S. America, this frog derives its skin toxin from the ants on which it feeds.

3–4 cm
1¼–1½ in

DYEING POISON FROG
Dendrobates tinctorius

This is the blue, or *azureus*, form of this variable S. American species. Both sexes protect the eggs and are very aggressive while defending their territory.

3–4.5 cm
1¼–1½ in

long forelimbs

**STRAWBERRY
POISON-DART FROG**
Oophaga pumilio

The female of this species cares for the young by carrying tadpoles to water-filled bromeliads and feeding them with unfertilized eggs.

2–2.5 cm
¾–1 in

toes with adhesive pads

SPLASHBACK POISON FROG
Adelphobates galactonotus

Living in leaf litter in Brazilian forests, this frog lays eggs on the ground and carries the tadpoles to water.

3–4 cm
1¼–1½ in

rounded snout

RIO MADEIRA POISON FROG
Adelphobates quinquevittatus

Found in Brazil and Peru, this tiny frog carries its tadpoles to water-filled holes, where the female feeds them with unfertilized eggs.

1.5–2 cm
½–¾ in

**GRANULAR
POISON FROG**
Oophaga granulifera

This species is found in Costa Rica and Panama. Females care for the young by feeding them with unfertilized eggs.

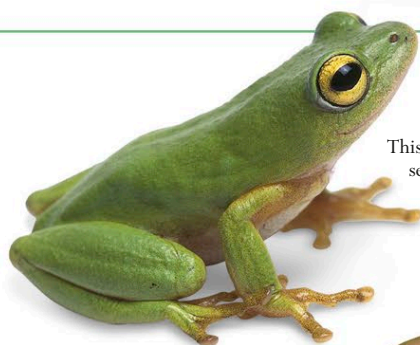

2 cm
¾ in

**BRAZIL-NUT
POISON FROG**
Adelphobates castaneoticus

This species is found in Brazil. The males of this frog place tadpoles individually into small, water-filled tree-holes. The tadpoles are voracious feeders.

2–2.5 cm
¾–1 in

TINKER REED FROG
Hyperolius tuberilinguis

This agile frog is noted for its loud call. In the mating season, thousands of males may gather around a pond to produce a deafening chorus.

3–4.5 cm
1¼–1½ in

large adhesive disc on toes

**BOLIFAMBA
REED FROG**
Hyperolius bolifambae

This small W. African frog occurs in bushland, and breeds in pools. The male's call is a high-pitched buzz.

2–3.5 cm
¾–1½ in

large eyes

AUSTRALIAN GROUND FROGS

The Limnodynastidae, found in Australia and New Guinea, include many terrestrial and burrowing frog species. Two recently extinct species uniquely brooded their eggs in the stomach.

BROWN-STRIPED MARSH FROG
Limnodynastes peronii

This Australian frog survives dry periods by burying itself in the ground. It emerges to breed after heavy rain, and deposits its eggs in floating foam nests.

3–6 cm
1¼–2¼ in
