

### SMALL-HEADED TREEFROG

*Dendropsophus microcephalus*  
Found in C. and S. America and Trinidad, this frog breeds in pools. It is pale yellow by day, and red-brown by night.

2–3 cm  
¾–1¼ in

horizontal pupils

5–10 cm  
2–4 in

### AUSTRALIAN GREEN TREEFROG

*Litoria caerulea*  
Found in N.E. Australia and New Guinea, this agile climber is often found close to human habitations.

## NEW ZEALAND FROGS

This family, the Leiopelmatidae, is composed of four species of frogs that are all confined to New Zealand. They are characterized by extra vertebrae and, unlike most frogs, they kick their legs alternately when swimming. They live in humid forests and are nocturnal.

2.5–3.5 cm  
1–1½ in

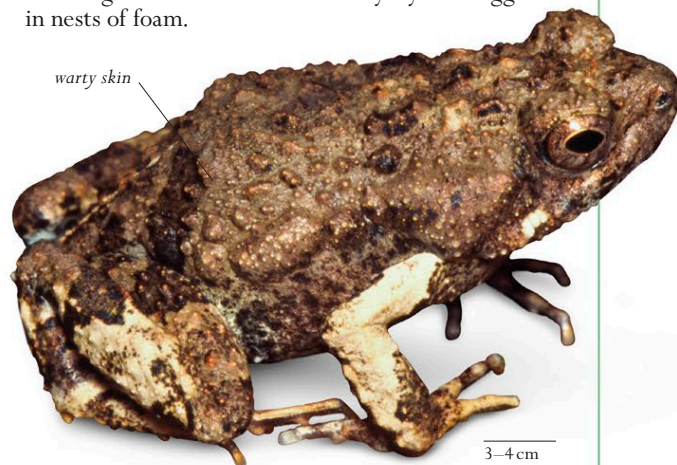

### COROMANDEL NEW ZEALAND FROG

*Leiopelma archeyi*  
Found only in New Zealand's North Island, this terrestrial frog lays its eggs under logs. It is critically endangered, as a result of habitat loss and disease.

## TROPICAL GRASS FROGS

The Leptodactylidae are a large, varied family of mostly ground-dwelling frogs from North, Central, and South America, and the West Indies, with a pointed snout and long, powerful hind limbs. Their breeding habits are varied and many lay their eggs in nests of foam.

warty skin

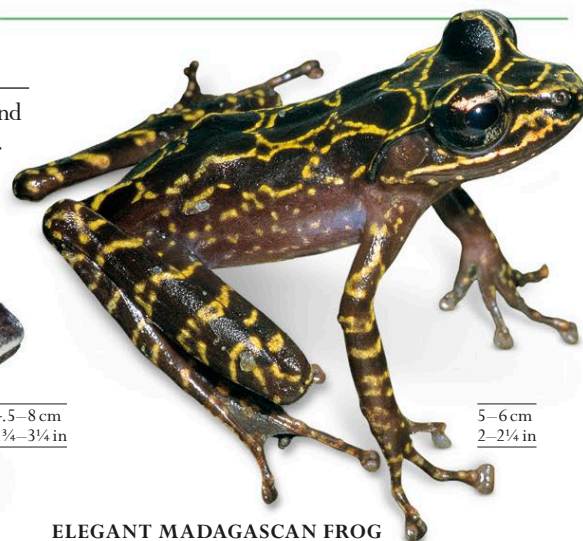

3–4 cm  
1¼–1½ in

### TÚNGARA FROG

*Engystomops pustulosus*  
During mating, the female of this C. American species produces a secretion that the male whips into a floating foam nest in which the eggs are laid.

## MANTELLAS

Found only on the islands of Madagascar and Mayotte, the Mantellidae are active by day. Many are brightly coloured, warning predators of powerful toxins in their skin. Most species are threatened by the loss of habitat and by the international pet trade.

5–6 cm  
2–2¼ in

### ELEGANT MADAGASCAN FROG

*Spinomantis elegans*  
An inhabitant of rocky outcrops, this frog is found at high altitudes, even above the tree line. It breeds in streams.

2–2.5 cm  
¾–1 in

4.5–8 cm  
1¾–3¼ in

### WHITE-LIPPED BRIGHT-EYED FROG

*Boophis albilabris*  
This large arboreal frog, found only in Madagascar, lives near the streams in which it breeds. It has fully webbed hind feet.

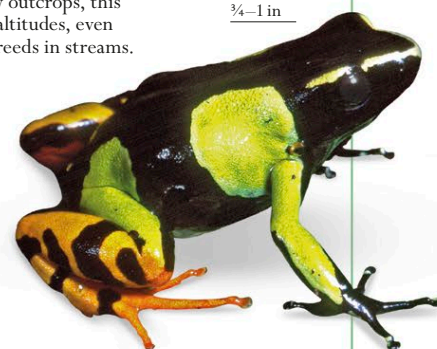

rough, moist skin

2–3 cm  
¾–1¼ in

### MADAGASCAN GOLDEN MANTELLA

*Mantella aurantiaca*  
The bright colour of this tiny frog from Madagascar rainforests warns potential predators that its skin secretes a powerful toxin.

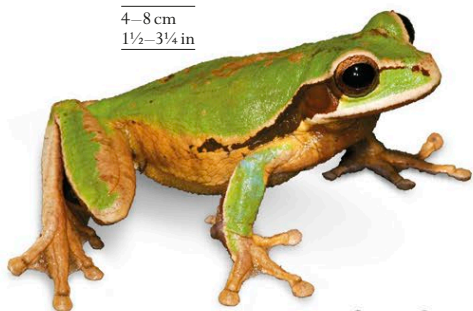

### PAINTED MANTELLA

*Mantella madagascariensis*  
This Madagascar frog breeds in forest streams. It is under threat due to loss of habitat. The male's call consists of short chirps.

### CORONATED TREEFROG

*Anotheca spinosa*  
Native to Mexico and C. America, this large frog lives in bromeliads and banana plants, laying its eggs in water-filled cavities.

4–8 cm  
1½–3¼ in

6–8 cm  
2¼–3¼ in

### MASKED TREEFROG

*Smilisca phaeota*  
Active only at night, this inhabitant of humid forests in C. and S. America lays its eggs in small pools.

bony projection

5–7.5 cm  
2–3 in

### YUCATAN CASQUE-HEADED TREEFROG

*Triprion petasatus*  
An inhabitant of lowland forests in Mexico and C. America, this frog retreats into tree-holes, using the bony projection on its head to seal the opening.
