#### ALPINE NEWT

*Ichthyosaura alpestris*

Found across much of N. Europe, this newt breeds in early spring. The female wraps eggs individually in the leaves of water plants.

#### SPECTACLED SALAMANDER

*Salamandrina terdigitata*

This secretive salamander is found only in Italy and lives in streams in hilly areas. It has a long, slender, and flattened body.

18–28 cm  
7–11 in

large,  
prominent eyes

#### FIRE SALAMANDER

*Salamandra salamandra*

This European salamander spends most of its time on land, entering water only to lay eggs. The glands on its head can spray a toxic secretion at enemies.

large glands  
secrete toxin

#### EASTERN NEWT

*Notophthalmus viridescens*

This pond-breeding newt is from eastern N. America. Juveniles, or "efts", are terrestrial, bright red in colour, and very toxic.

6.5–14 cm  
2½–5½ in

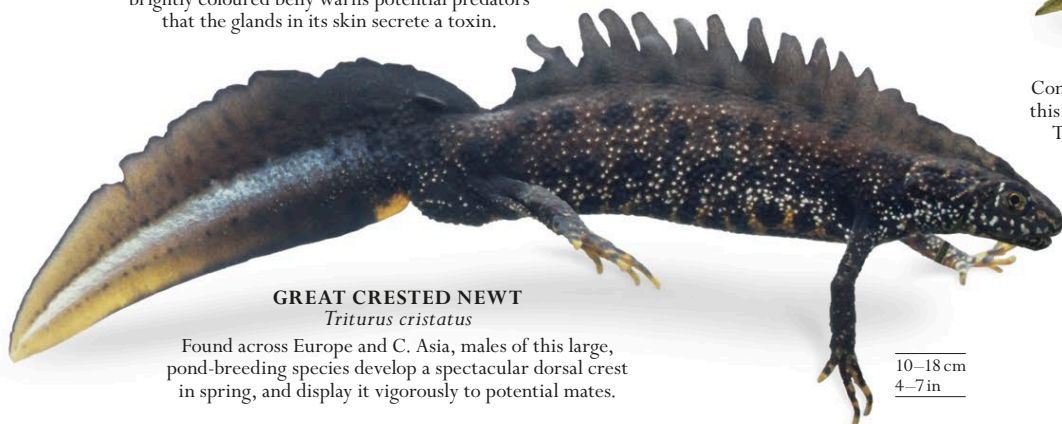

#### JAPANESE NEWT

*Cynops pyrrhogaster*

This newt spends much of its life in water. Its brightly coloured belly warns potential predators that the glands in its skin secrete a toxin.

9–12 cm  
3½–4¾ in

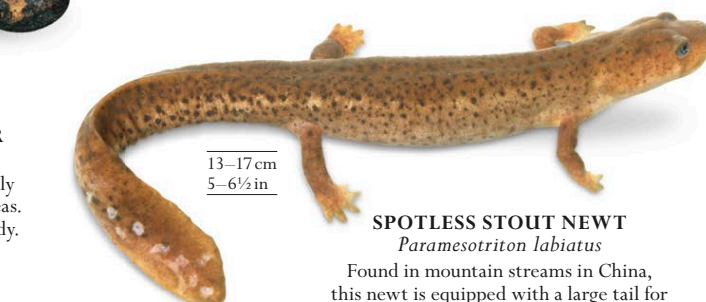

#### GREAT CRESTED NEWT

*Triturus cristatus*

Found across Europe and C. Asia, males of this large, pond-breeding species develop a spectacular dorsal crest in spring, and display it vigorously to potential mates.

10–18 cm  
4–7 in

13–17 cm  
5–6½ in

#### SPOTLESS STOUT NEWT

*Paramesotriton labiatus*

Found in mountain streams in China, this newt is equipped with a large tail for swimming. It attaches its eggs to rocks.

10–14 cm  
4–5½ in

#### SARDINIAN BROOK SALAMANDER

*Euproctus platycephalus*

Found only in Sardinia, this slender salamander lives in streams, laying its eggs under rocks. It is endangered due to degradation of its habitat.

9–13 cm  
3½–5 in

#### LORESTAN NEWT

*Neurergus kaiseri*

Found only in Iran, this species lives in streams. It is critically endangered due to loss of its habitat and its popularity as a pet.

orange and  
black limbs

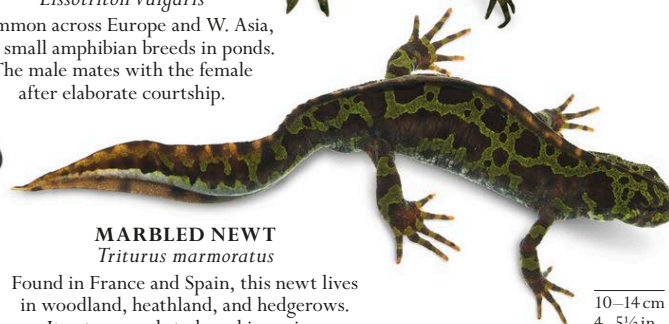

7–10 cm  
2¾–4 in

#### SMOOTH NEWT

*Lissotriton vulgaris*

Common across Europe and W. Asia, this small amphibian breeds in ponds. The male mates with the female after elaborate courtship.

#### MARBLED NEWT

*Triturus marmoratus*

Found in France and Spain, this newt lives in woodland, heathland, and hedgerows. It enters ponds to breed in spring.

10–14 cm  
4–5½ in
