

**BERBER SKINK**  
*Eumeces schneideri*

This diurnal skink eats insects, small vertebrates, and carrion. It is native to N. Africa and the deserts of S.W. Asia.

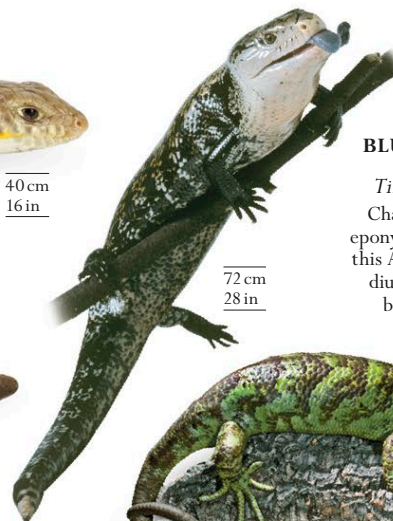

40 cm  
16 in

**MANY-LINED SUN SKINK**  
*Eutropis multifasciata*

Found in S. Asia, this lizard hunts insects in sunlit clearings within forests. It gives birth to live young.

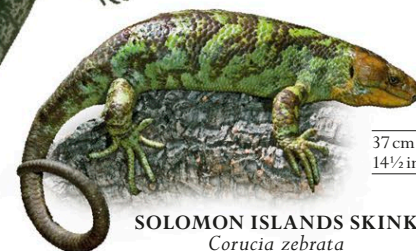

35 cm  
14 in

**EASTERN BLUE-TONGUED SKINK**  
*Tiliqua scincoides*

Characterized by its eponymous blue tongue, this Australian skink is a diurnal omnivore. It bears live young.

14½ in

**SOLOMON ISLANDS SKINK**  
*Corucia zebrata*

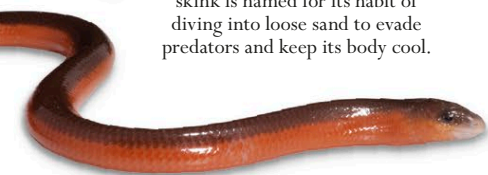

This is the world's largest skink. It is strictly arboreal, has a prehensile tail, and is herbivorous. It lives in groups.

**SANDBISH SKINK**  
*Scincus scincus*

This insectivorous, N. African skink is named for its habit of diving into loose sand to evade predators and keep its body cool.

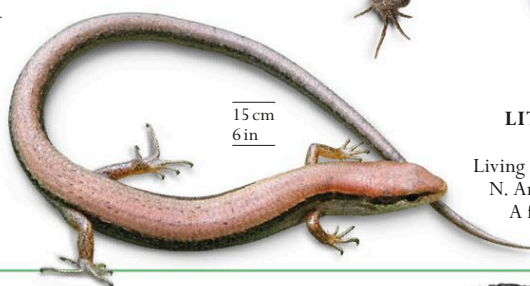

20 cm  
8 in

**LITTLE BROWN SKINK**  
*Scincella lateralis*

Living in leaf litter in woodland, this N. American skink hunts insects. A female can store sperm to fertilize her eggs.

15 cm  
6 in

**ROUGH-SCALED PLATED LIZARD**  
*Broadleysaurus major*

This omnivorous species is widely distributed in the savanna of E. Africa. It occupies crevices in rocky outcrops or termite nests.

48 cm  
19 in

**MADAGASCAN GIRDLED LIZARD**  
*Zonosaurus madagascariensis*

This insectivorous lizard is native to Madagascar. It prefers to be solitary, and feeds on the ground in open, dry habitats.

36 cm  
14 in

## PLATED LIZARDS

There are 32 species of plated lizards. All are from sub-Saharan Africa and lay eggs. They have a cylindrical body with well-developed legs for hunting insects in rocky areas and the savanna. Solitary in nature, the Gerrhosauridae are often aggressive to other members of their species.

## GIRDLED LIZARDS

Limited to southern and eastern Africa, the Cordylidae are named for the rings of spiny scales that encircle their tail. Their flattened body has limited space for live young or eggs. In viviparous species, this restricts litter size; oviparous species lay only two eggs.

**CAPE GIRDLED LIZARD**  
*Cordylus cordylus*

Endemic to southern Africa, this lizard lives in dense colonies. Adults are aggressive, and form social hierarchies under a dominant male.

## MICROTEIID LIZARDS

There are 165 species of the Gymnophthalmidae in tropical South America. Generally small, they are characterized by large scales on their back. These are diurnal and secretive insectivorous lizards and their dull coloration provides camouflage in leaf litter. Most species lay eggs.

**BROMELIAD LIZARD**  
*Anadia ocellata*

An arboreal species found in C. America, the bromeliad lizard hunts insects and takes refuge in foliage.
