

» BIRDS OF PREY

71–96 cm
28–38 in

BALD EAGLE
Haliaeetus leucocephalus
F: Accipitridae

This N. American sea eagle, the USA's national emblem, captures or scavenges fish, sometimes hunting co-operatively. It breeds in woodland near water.

55–72 cm
22–28 in

BONELLI'S EAGLE
Aquila fasciatus
F: Accipitridae

A woodland- and mountain-dwelling species, this long-winged buzzard-like eagle has a range that extends from S. Eurasia to N. Africa.

55–65 cm
22–26 in

EASTERN IMPERIAL EAGLE
Aquila heliaca
F: Accipitridae

True eagles, including those of the *Aquila* genus, such as this Eurasian species, are described as "booted" because of their fully feathered legs.

AFRICAN HAWK-EAGLE
Aquila spilogaster
F: Accipitridae

A small raptor from sub-Saharan Africa, this hawk eagle hunts in wooded savanna and hilly country.

GOLDEN EAGLE
Aquila chrysaetos
F: Accipitridae

A graceful soaring bird, this large, long-tailed eagle occurs in open country across the northern hemisphere. It frequents forests in some regions.

WHITE-BELLIED SEA EAGLE
Haliaeetus leucogaster
F: Accipitridae

With a distribution from India to Australasia along lakes and rivers, like other large eagles, this fishing raptor builds huge stick nests.

70–90 cm
28–35 in

72–85 cm
28–34 in

WHITE-HEADED VULTURE
Trigonoceps occipitalis
F: Accipitridae

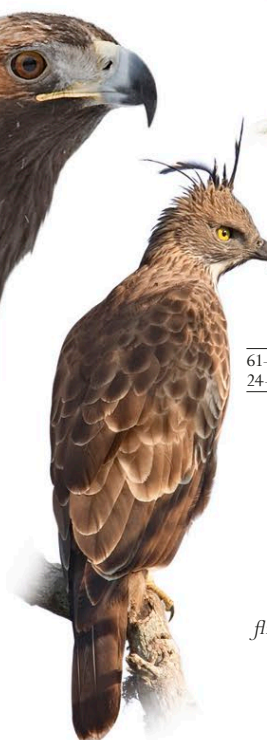

Found in N., E., and S. Africa, this vulture is often seen in pairs, and is usually outnumbered by other vulture species when feeding on carcasses.

EGYPTIAN VULTURE
Neophron percnopterus
F: Accipitridae

A relative of the palm-nut vulture, this bird of S. Eurasia and Africa routinely uses rocks to crack open ostrich eggs.

60–70 cm
23½–28 in

61–75 cm
24–30 in

CHANGEABLE HAWK-EAGLE
Spizaetus cirrhatus
F: Accipitridae

Often crested, Asian hawk-eagles are forest raptors. This variable species has dark and pale forms and is found from the Himalayas to Indonesia.
