

**COCKATIEL**

Nymphicus hollandicus
F: Psittacidae

A bird of Australia's dry interior, this species resembles a parakeet, but its DNA shows it is a miniature cockatoo.

32 cm
12½ in

**CHATTERING LORY**

Lorius garrulus
F: Psittacidae

One of a group of green-winged red lorries from New Guinea and surrounding islands, this species is from the Moluccas.

30 cm
12 in

**DUSKY LORY**

Pseudeos fuscata
F: Psittacidae

The patchy brown coloration of this species is unique among lorries. This bird occurs in New Guinea and nearby islands.

25 cm
10 in

**BLACK-WINGED LORY**

Eos cyanogenia
F: Psittacidae

The *Eos* lorries are vividly red and violet Indonesian birds. This is the easternmost species, restricted to the area around Geelvink Bay, New Guinea.

30 cm
12 in

**OLIVE-HEADED LORIKEET**

Trichoglossus euteles
F: Psittacidae

Found on the island of Timor, this long-tailed relative of the rainbow lorikeet has bright green plumage, typical of many parrots.

24 cm
9½ in

**VARIED LORIKEET**

Psitteuteles versicolor
F: Psittacidae

A small lorikeet from northern Australian woodlands, this species nests in eucalyptus tree cavities, like many other parrots in its habitat.

18 cm
7 in

**AUSTRALIAN KING PARROT**

Alisterus scapularis
F: Psittacidae

King parrots are rainforest birds from tropical Australasia and represent an evolutionary link to Asian parakeets. This species occurs in E. Australia.

purple rump

**RAINBOW LORIKEET**

Trichoglossus haematodus
F: Psittacidae

A variable species, this bird is found in many habitats with nectar-giving blossom. Its range includes most of Australasia and the islands of the southwest Pacific.

25–30 cm
10–12 in

mainly green body

**ECLECTUS PARROT**

Eclectus roratus
F: Psittacidae

Males and females of this parrot are so different they were originally classified as separate species. They are found in tropical Australasian rainforests.

33–39 cm
13–15½ in

**BUDGERIGAR**

Melopsittacus undulatus
F: Psittacidae

A nomadic Australian bird, this small parrot from arid regions flocks to watering holes. Despite being a seed-eater, it is related to nectar-feeding lorikeets.

18 cm
7 in

RED-FRONTED PARAKEET

Cyanoramphus novaezelandiae
F: Psittacidae

Small parakeets with coloured foreheads have diversified in the southwest Pacific, and include the only parakeets – like this species – from New Zealand.

27 cm
10½ in

**AUSTRALIAN RINGNECK**

Barnardius zonarius
F: Psittacidae

Named for its yellow neck-ring, this Australian bird has black- and green-headed forms. It is widespread in woodland.

34–38 cm
13½–15 in
