

» WOODPECKERS AND TOUCANS

GROUND WOODPECKER
Geocolaptes olivaceus
F: Picidae

Unusual in living on the ground, this South African ant-eating woodpecker inhabits barren, rocky areas and tunnels into earth banks to make a nesting chamber.

30 cm
12 in

HEART-SPOTTED WOODPECKER
Hemicircus canente
F: Picidae

One of two related small, crested woodpeckers from S.E. Asia, this species is named for the black, heart-shaped marks on its back.

15–17 cm
6–6½ in

GOLDEN-GREEN WOODPECKER
Piculus chrysoclorus
F: Picidae

Typical of a group of green-backed woodpeckers from tropical America, this bird often follows mixed-species flocks, gleaning bark surfaces.

white underparts

RED-HEADED WOODPECKER
Melanerpes erythrocephalus
F: Picidae

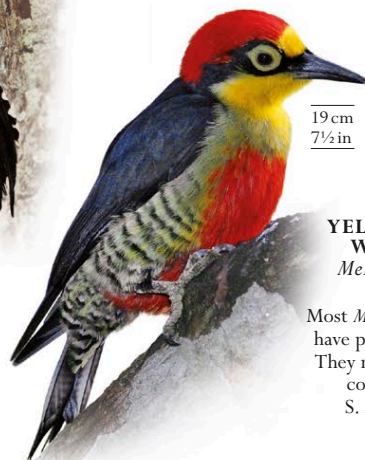

A distinctive woodpecker from N. America, this is an aggressive species that destroys nests and eggs of other birds in its territory.

24 cm
9½ in

RED-BELLIED WOODPECKER
Melanerpes carolinus
F: Picidae

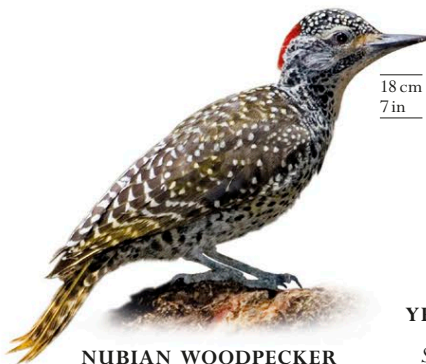

Like other *Melanerpes* woodpeckers, this common N. American species stores food in crevices. Despite its name, the belly only has a tinge of red.

19 cm
7½ in

YELLOW-FRONTED WOODPECKER
Melanerpes flavifrons
F: Picidae

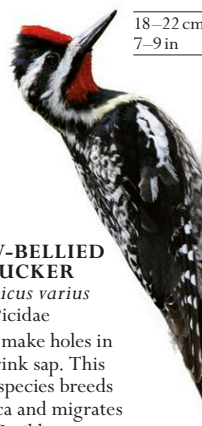

Most *Melanerpes* woodpeckers have partly barred plumage. They may also have striking colours, as does this S. American species.

NUBIAN WOODPECKER
Campethera nubica
F: Picidae

This relative of the European green woodpecker occurs in dry parts of northeastern Africa, where it is often seen in pairs.

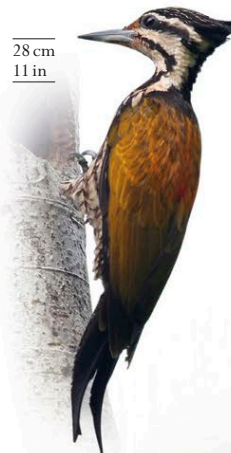

18 cm
7 in

YELLOW-BELLIED SAPSUCKER
Sphyrapicus varius
F: Picidae

Sapsuckers make holes in trees to drink sap. This fork-tailed species breeds in N. America and migrates to the Caribbean.

18–22 cm
7–9 in

COMMON FLAME-BACKED WOODPECKER
Dinopium javanense
F: Picidae

A tropical woodpecker, this species occurs in a variety of woodland types – including mangrove – and ranges from India eastwards to Borneo and Java.

28 cm
11 in

PILEATED WOODPECKER
Dryocopus pileatus
F: Picidae

This is the largest N. American woodpecker. Unlike the Eurasian black woodpecker, American members of the *Dryocopus* genus are crested.

40–49 cm
16–19½ in

BLACK WOODPECKER
Dryocopus martius
F: Picidae

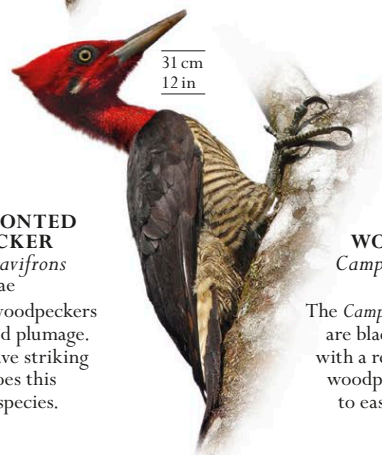

This large woodpecker from woodlands across N. Eurasia belongs to a small group of predominantly black species that have a red crown.

31–33 cm
12–13 in

white patch on wing

GREEN WOODPECKER
Picus viridis
F: Picidae

This European member of a group of Old World green-backed woodpeckers is also called the yaffle after its distinct yelping call.

31 cm
12 in

ROBUST WOODPECKER
Campephilus robustus
F: Picidae

The *Campephilus* woodpeckers are black and white birds with a red head. The robust woodpecker is restricted to eastern S. America.
