

43–74 cm
17–29 in

forearms of similar
length to hind legs

**SOUTHERN
PIG-TAILED MACAQUE**
Macaca nemestrina

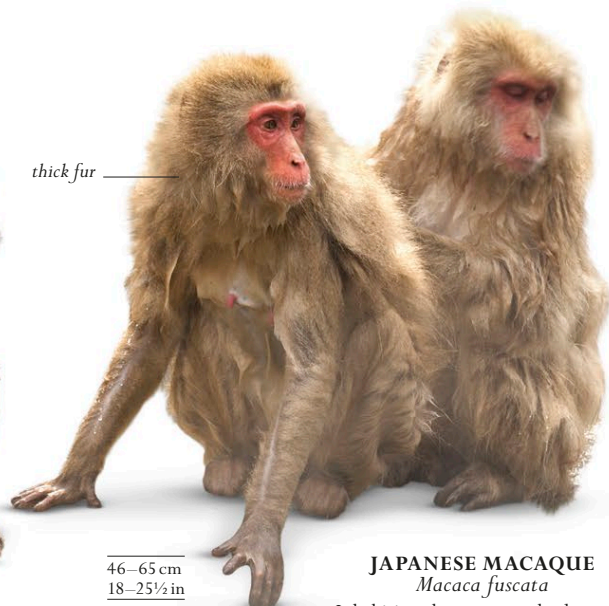

This monkey inhabits humid areas, including rainforest and swamps in S.E. Asia. Its diet consists mainly of fruits.

35–60 cm
14–23½ in

BONNET MACAQUE
Macaca radiata

Often found close to human habitation, this resident of S. India is omnivorous and may rely on humans for food.

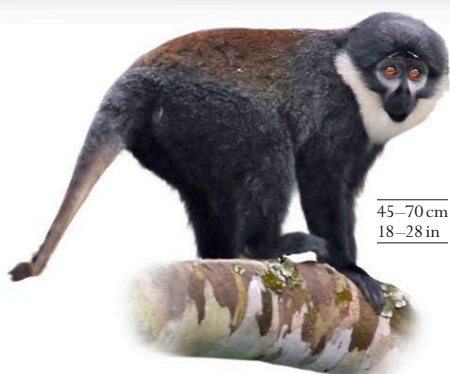

thick fur

46–65 cm
18–25½ in

JAPANESE MACAQUE
Macaca fuscata

Inhabiting the most northerly range of any non-human primate, the Japanese macaque uses hot springs to keep warm in winter.

45–70 cm
18–28 in

L'HOEST'S MONKEY
Allochrocebus lhoesti

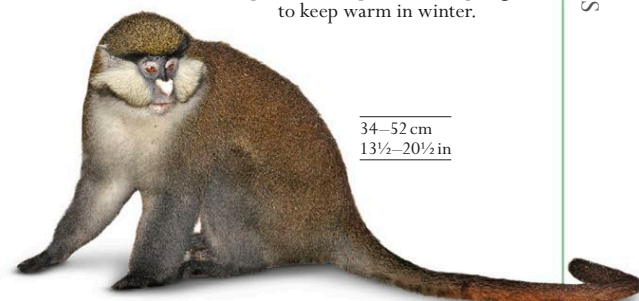

Also known as the mountain monkey, this arboreal guenon lives in moist primary forests in the highlands of C. Africa.

20–68 cm
8–27 in

**WHITE-THROATED
GUENON**
Cercopithecus albogularis

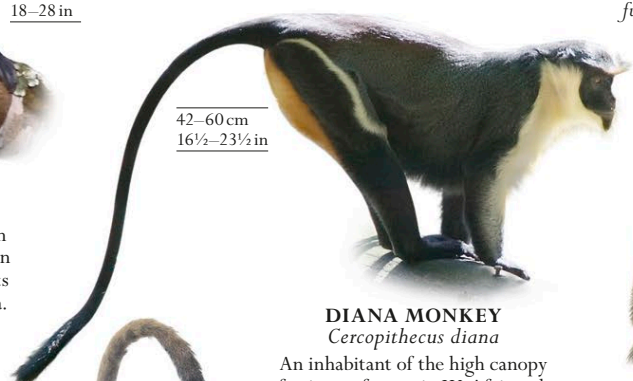

Also called the Sykes' monkey, this tree-dwelling omnivore is distributed in E. and S.E. Africa, including Zanzibar and the Mafia Islands.

34–52 cm
13½–20½ in

RED-TAILED MONKEY
Cercopithecus ascanius

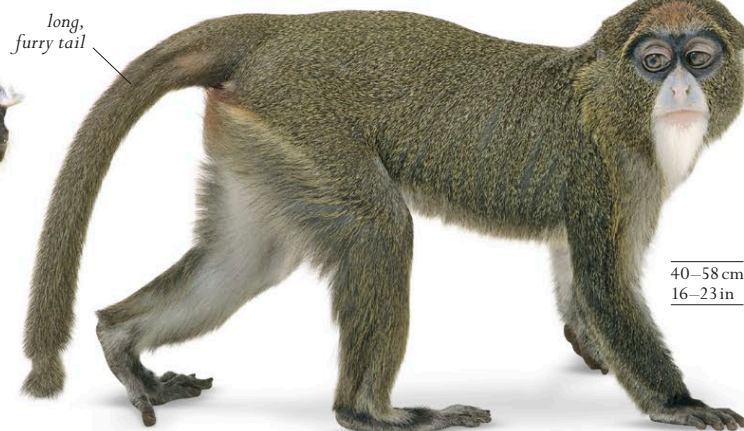

An arboreal species of moist forest habitats in C. Africa, the red-tailed monkey has large cheek pouches, in which it stores fruits.

42–60 cm
16½–23½ in

DIANA MONKEY
Cercopithecus diana

An inhabitant of the high canopy of primary forests in W. Africa, the Diana monkey rarely descends to the ground.

40–58 cm
16–23 in

**DE BRAZZA'S
MONKEY**
Cercopithecus neglectus

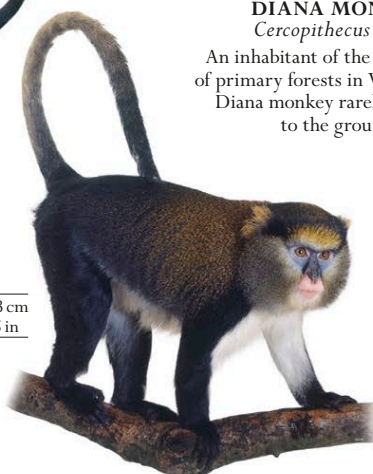

This is a semi-terrestrial species of C. African swamp forests. Males are larger than females and have a distinctive blue scrotum.

39–71 cm
15½–28 in

BLUE MONKEY
Cercopithecus mitis

Social groups of this African native number up to 40 individuals and consist of a dominant alpha male, several females, and their offspring.

38–63 cm
15–25 in

MONA MONKEY
Cercopithecus mona

A tree-dwelling species, this monkey inhabits rainforest and mangrove forests from Ghana to Cameroon.

45–66 cm
18–26 in

GOLDEN-BELLIED MANGABEY
Cercopithecus chrysogaster

This mainly terrestrial mangabey lives in rainforest and swamp forest in the Congo basin. It forages by day in groups of up to at least 35 individuals.

55–85 cm
22–34 in

**NORTHERN BLACK-
CRESTED MANGABEY**
Lophocebus aterrimus

An arboreal species that prefers rainforest, this mangabey is found in the Democratic Republic of Congo.
