

SWIFT FOX
Vulpes velox

This close relative of the kit fox occurs in the C. USA and has been reintroduced in Canada, where it became extinct in 1938.

47–55 cm
18½–22 in

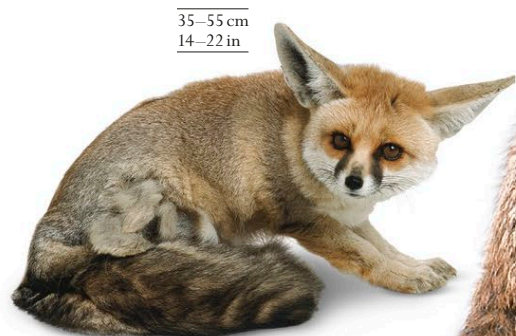

FENNEC FOX
Vulpes zerda

The distinctive ears of this tiny, nocturnal N. African fox serve a dual purpose: providing keen hearing and shedding excess body heat.

pointed ears,
black on top

33–41 cm
13–16 in

35–55 cm
14–22 in

RÜPPEL'S FOX
Vulpes rueppellii

Ranging from N. Africa to Pakistan, this small, social fox survives desert conditions by eating a wide range of plants and animals.

large, bushy
tail, with a
white tip

RED FOX
Vulpes vulpes

This highly adaptable hunter and scavenger is the world's most widespread carnivore, occurring throughout most of the northern hemisphere.

black
lower limb

59–90 cm
23–35 in

46–60 cm
18–23½ in

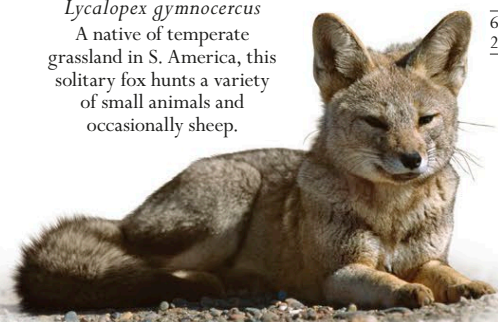

BAT-EARED FOX
Otocyon megalotis

Inhabiting open grassland and scrubby savanna in S. and E. Africa, this social fox feeds chiefly on termites and beetles.

PAMPAS FOX
Lycalopex gymnocercus

A native of temperate grassland in S. America, this solitary fox hunts a variety of small animals and occasionally sheep.

60–74 cm
23½–29 in

54–66 cm
21½–26 in

NORTHERN GREY FOX
Urocyon cinereoargenteus

This fox is a relatively common inhabitant of forested areas throughout the Americas, though it avoids areas where coyotes and bobcats live.

brown-black
body fur

49–70 cm
19½–28 in

RACCOON DOG
Nyctereutes procyonoides

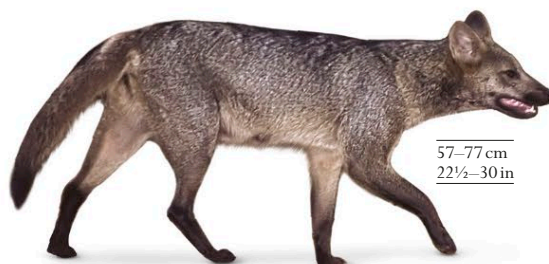

This unusual canid inhabits wetlands in E. Asia. It climbs well and is the only species of dog to hibernate.

45–92 cm
18–36 in

CULPEO
Pseudalopex culpaeus

A large, solitary fox from the highlands of S. America, the culpeo hunts larger prey than most other fox species.

57–77 cm
22½–30 in

CRAB-EATING FOX
Cerdonyon thous

An adaptable omnivore from the grasslands and temperate and tropical forests of S. America, this species feeds on fruits, carrion, and small animals.
