

ANDEAN CAT
Leopardus jacobita

This extremely rare species is restricted to remote uplands, where it is seldom seen by humans. It eats chinchilla-like rodents called viscachas.

58–64 cm
23–25 in

GEOFFROY'S CAT
Leopardus geoffroyi

An adaptable hunter of small mammals, fish, and birds, Geoffroy's cat stalks grasslands, forests, and wetlands from Bolivia to S. Argentina.

43–88 cm
17–35 in

spotted coat
varies from
grey to golden

COLOCOLO
Leopardus colocolo

Highly adaptable, the mainly nocturnal colocolo is found in a wide variety of habitats in S. America, from forest to grassland and swamp.

42–79 cm
16½–31 in

ONCILLA
Leopardus tigrinus

This spotted forest dweller is widespread from Costa Rica to Argentina, where it hunts rodents, opossums, and birds. It is solitary and nocturnal.

38–56 cm
15–22 in

OCELOT
Leopardus pardalis

Ocelots occupy forested parts of C. and S. America. They hunt nocturnally, targeting rodents and other prey on land and in water.

72–100 cm
28–39 in

large eyes adapted to
nocturnal lifestyle

MARGAY
Leopardus wiedii

Seldom seen because of its rarity and preference for dense forest cover, the margay is found from Mexico to northern S. America.

43–79 cm
17–31 in

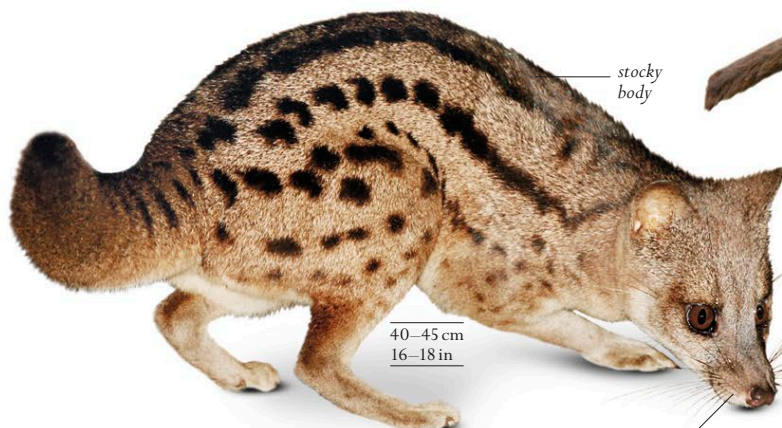

strong claws are hidden
within fleshy sheaths

lithe body
adapted for
climbing

MALAGASY CARNIVORES

The large island of Madagascar has been separate from other land masses for the last 88 million years, allowing its resident mammals to evolve independently. Its native carnivores are now classified in their own family, the Eupleridae. They are very varied in appearance, having diversified to fill the niches occupied elsewhere by predators such as cats, weasels, and mongooses.

SPOTTED FANALOKA
Fossa fossana

A small civet-like animal, the spotted fanaloka inhabits Madagascar's wet forests. It hunts invertebrate prey on land and in water.

40–45 cm
16–18 in

fox-like
pointed muzzle

FOSSA

Cryptoprocta ferox
The cat-like fossa is the largest Malagasy carnivore. It hunts mainly lemurs, but it will eat almost any small animal it can catch.

60–80 cm
23½–32 in

30–38 cm
12–15 in

FALANOUC
Eupleres goudotii

A ground-dwelling, nocturnal forest animal, the falanouc is an adept digger. It uses its large feet to unearth invertebrate prey.

45–50 cm
18–20 in

RING-TAILED VONTSIRA
Galidia elegans

The Malagasy equivalent of mongooses, vontsiras are active forest animals. They feed opportunistically on most plant and animal foods.
