

WESTERN HARTEBEE
Alcelaphus major
A large, long-faced antelope that lives on open grassland in E. Africa. Hartebeest species differ in their coloration and horn shape.

143 cm
56 in

RED HARTEBEE
Alcelaphus caama
Chestnut brown in colour, with a darker face and tail, this antelope is most active at dawn and dusk.

1.2–1.3 m
4–4¼ ft

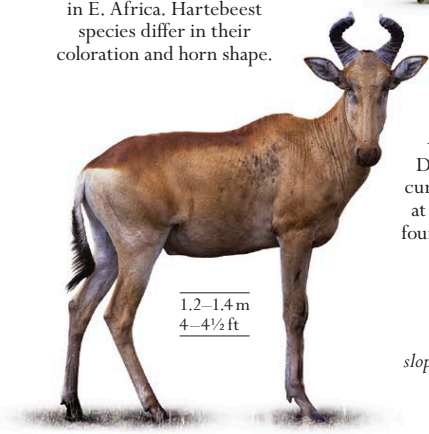

KLIPSPRINGER
Oreotragus sp.
Meaning “rock jumper” in Afrikaans, the klipspringer inhabits rocky outcrops. It can leap more than ten times its own height.

42–57 cm
16½–22½ in

CENTRAL ORIBI
Ourebia hastata
This graceful, long-necked antelope from E. Africa west to Angola has a distinctive white brow line and a large, dark facial gland.

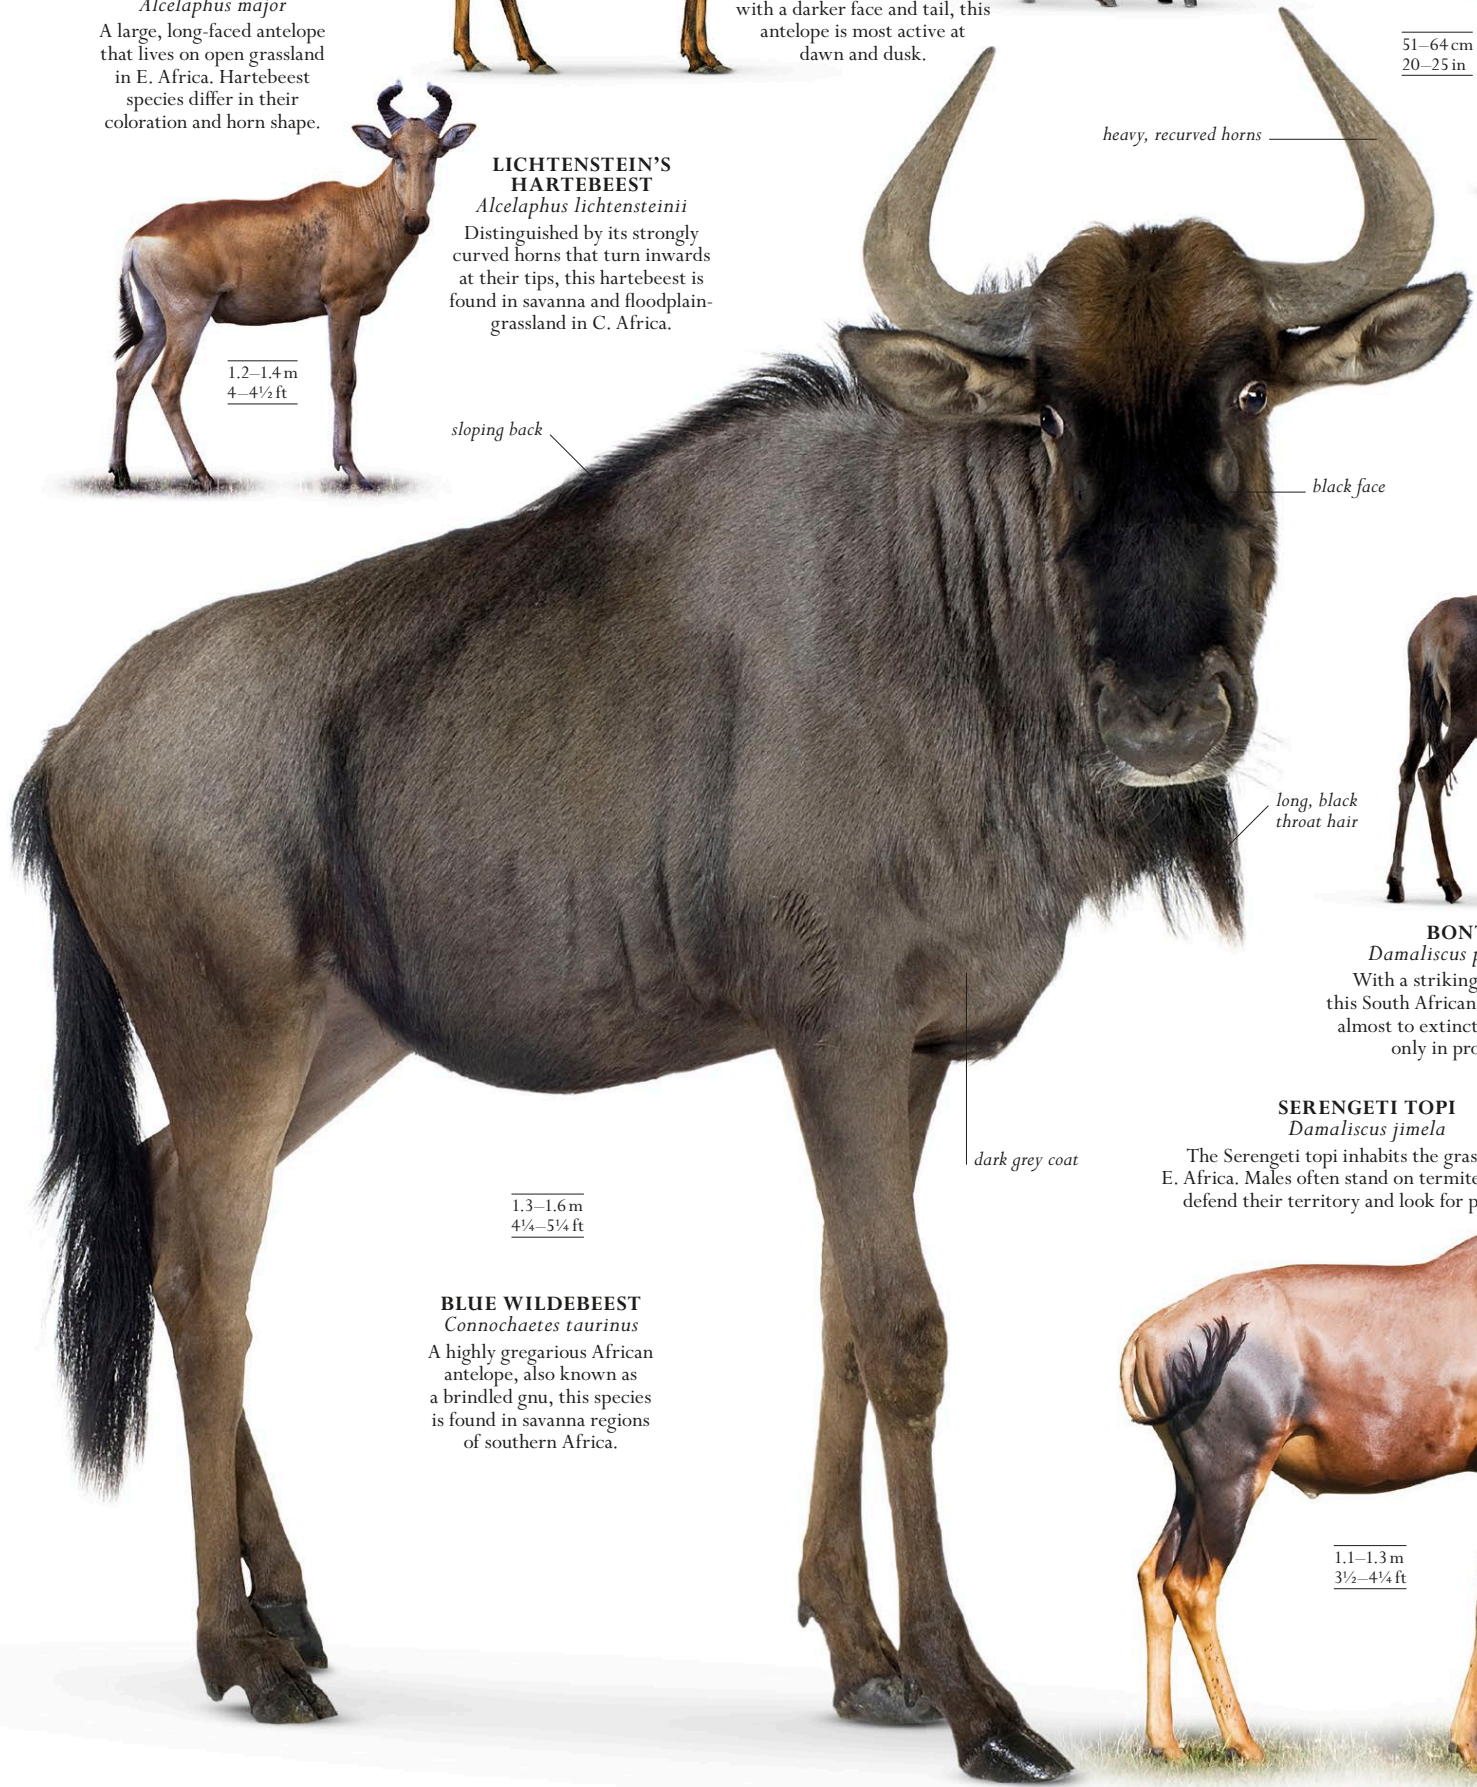

51–64 cm
20–25 in

LICHTENSTEIN'S HARTEBEE
Alcelaphus lichtensteinii
Distinguished by its strongly curved horns that turn inwards at their tips, this hartebeest is found in savanna and floodplain-grassland in C. Africa.

1.2–1.4 m
4–4½ ft

sloping back

BLUE WILDEBEE
Connochaetes taurinus
A highly gregarious African antelope, also known as a brindled gnu, this species is found in savanna regions of southern Africa.

1.3–1.6 m
4¼–5¼ ft

dark grey coat

heavy, recurved horns

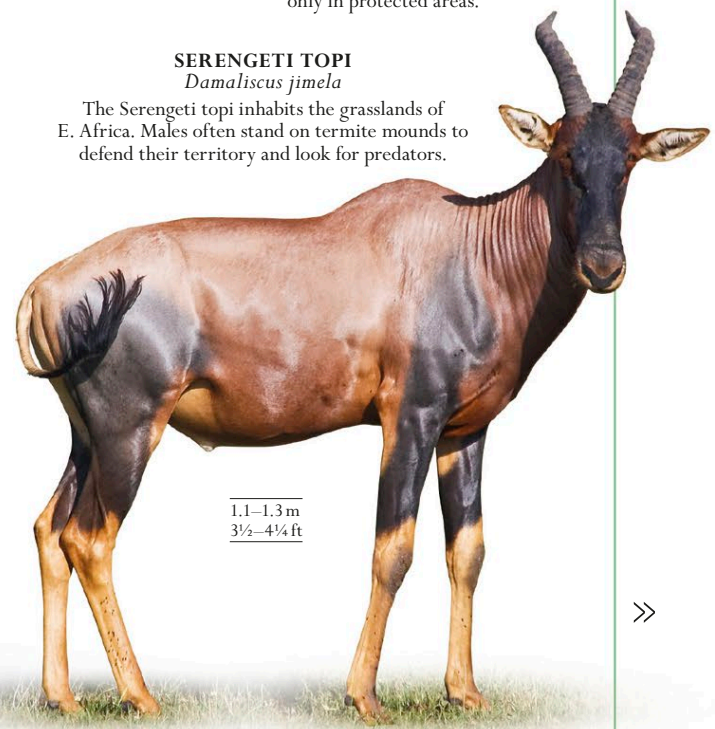

black face

long, black throat hair

BONTEBOK
Damaliscus pygargus dorcas
With a striking white face patch, this South African antelope was hunted almost to extinction. It is now found only in protected areas.

80–100 cm
32–39 in

SERENGETI TOPI
Damaliscus jimela
The Serengeti topi inhabits the grasslands of E. Africa. Males often stand on termite mounds to defend their territory and look for predators.

1.1–1.3 m
3½–4¼ ft
