

MOUFLON
Ovis aries orientalis

With a reddish coat and pale saddle, this native of Asia Minor has been established on several Mediterranean islands since Neolithic times.

MANX LOAGHTAN SHEEP
Ovis aries

Originating on the Isle of Man, this primitive, hardy breed, kept for its meat, has brown wool and usually four horns.

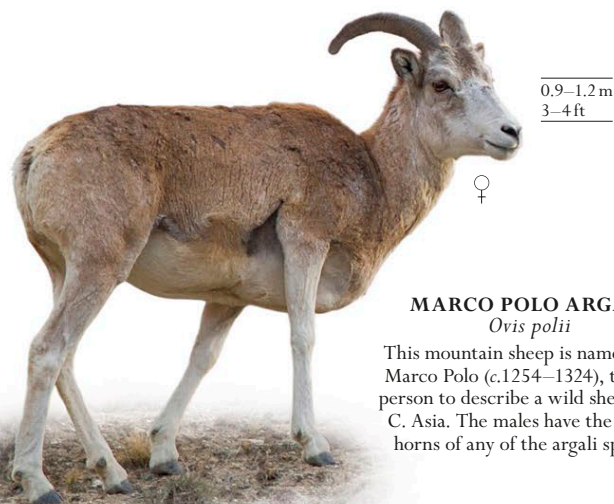

COTSWOLD SHEEP
Ovis aries

Originating in England, this white-faced breed is hardy and dual-purpose, kept for its long wool and its meat.

JACOB SHEEP
Ovis aries

This ancient, hardy breed, with a patterned coat, is said to have originated in Palestine. It has as many as three pairs of horns.

MARCO POLO ARGALI
Ovis polii

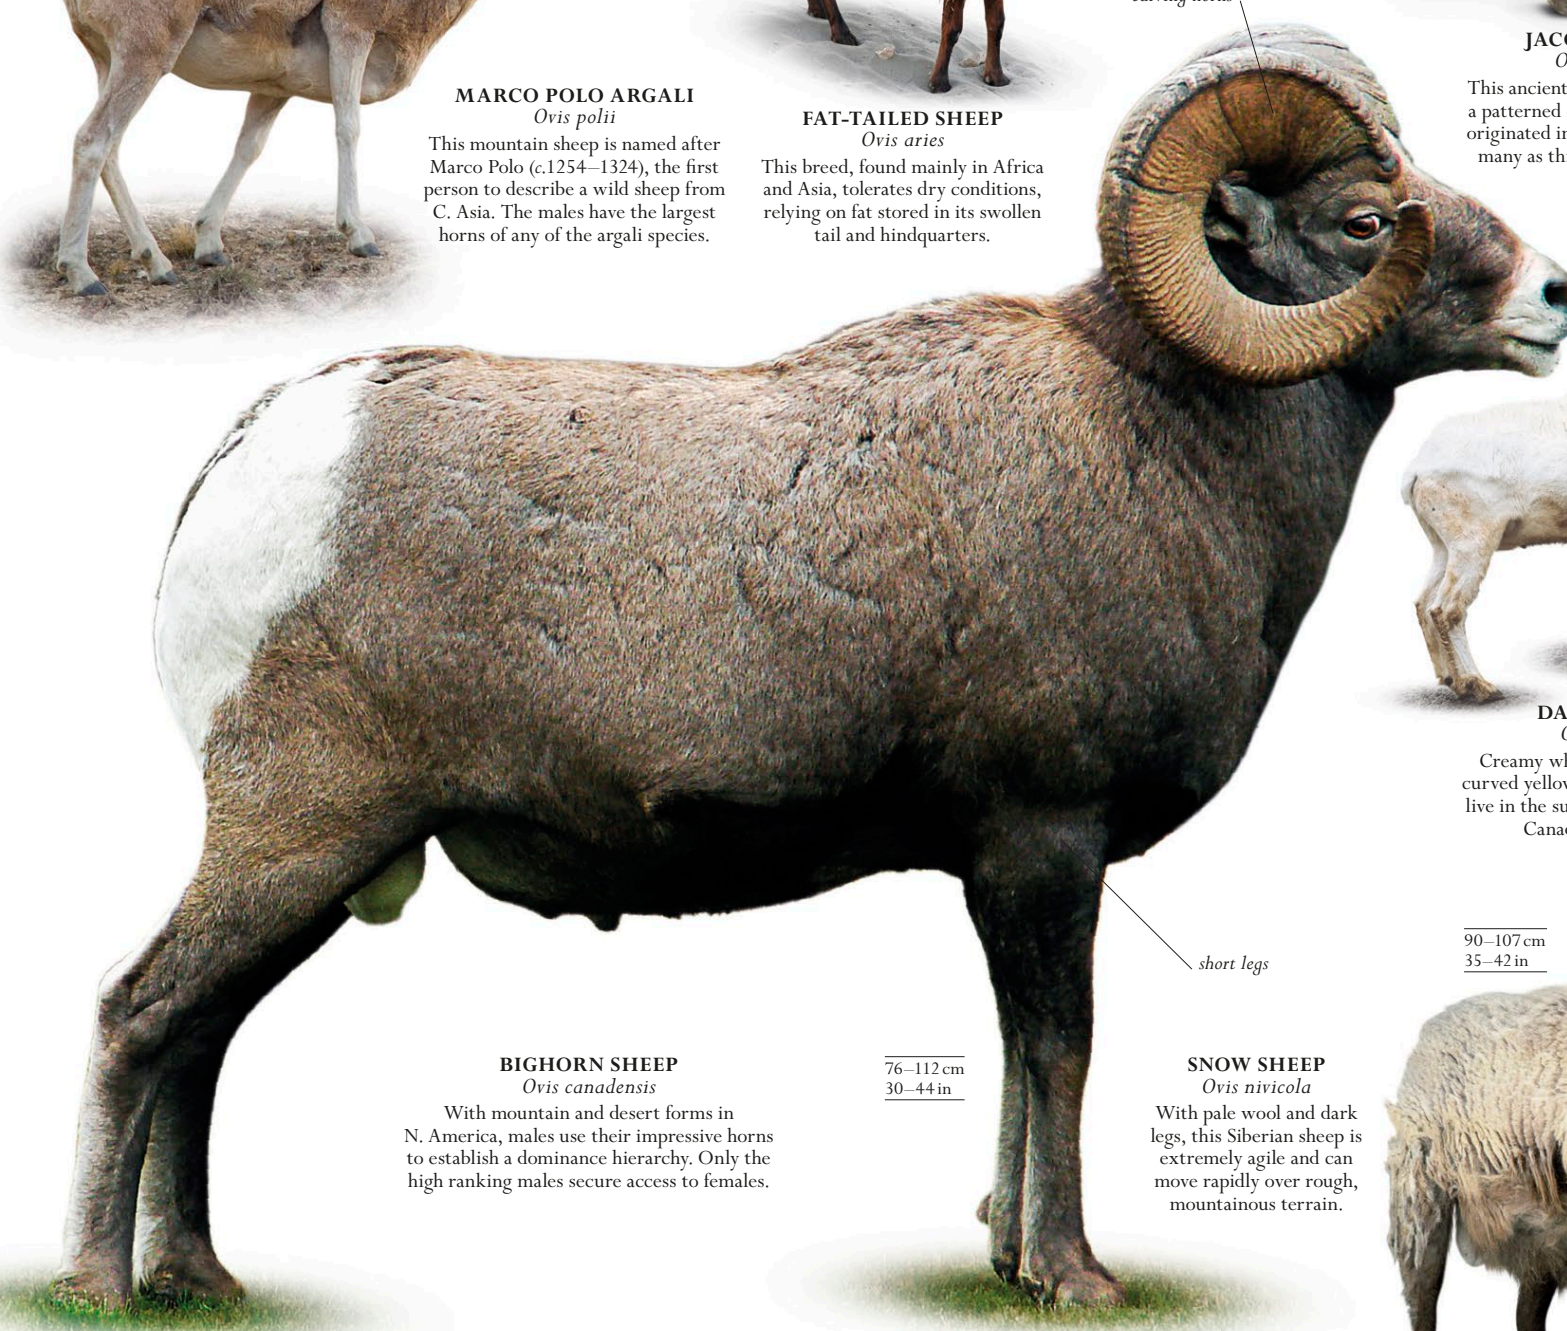

This mountain sheep is named after Marco Polo (c.1254–1324), the first person to describe a wild sheep from C. Asia. The males have the largest horns of any of the argali species.

FAT-TAILED SHEEP
Ovis aries

This breed, found mainly in Africa and Asia, tolerates dry conditions, relying on fat stored in its swollen tail and hindquarters.

massive,
curving horns

BIGHORN SHEEP
Ovis canadensis

With mountain and desert forms in N. America, males use their impressive horns to establish a dominance hierarchy. Only the high ranking males secure access to females.

76–112 cm
30–44 in

short legs

DALL SHEEP
Ovis dalli

Creamy white or brown, with curved yellowish horns, dall sheep live in the subarctic mountains of Canada and Alaska.

79–109 cm
31–43 in

SNOW SHEEP
Ovis nivicola

With pale wool and dark legs, this Siberian sheep is extremely agile and can move rapidly over rough, mountainous terrain.

90–107 cm
35–42 in
