

» FOSSIL VERTEBRATES: DINOSAURS

**DIPLODOCUS
TAIL VERTEBRA***Diplodocus longus*

Found in Jurassic strata, *Diplodocus* was a giant plant-eater that grew up to 27 m (89 ft) in length. Its tail was long and whip-like.

**BRACHIOSAURUS
THIGH BONE***Brachiosaurus* sp.

A huge, plant-eating dinosaur that grew to 25 m (82 ft) in length, *Brachiosaurus* lived in the Jurassic and Cretaceous Periods.

**COELOPHYSIS
SKELETON***Coelophysis bauri*

Fossils of *Coelophysis* are found in Triassic rocks. Only 3 m (10 ft) long, this carnivore had a bird-like skeleton.

**PROCERATOSAURUS PARTIAL SKULL***Proceratosaurus bradleyi*

A carnivore from Middle Jurassic strata in Gloucestershire, England, *Proceratosaurus* had a bony crest on its head.

**MEGALOSAURUS
SACRAL VERTEBRAE***Megalosaurus bucklandi*

Found in Middle Jurassic strata, *Megalosaurus* was 9 m (30 ft) long, with a large head and strong hind limbs. It was carnivorous.

**GALLIMIMUS SKULL***Gallimimus bullatus*

Growing up to 6 m (20 ft) long, *Gallimimus* had a bird-like, beaked skull, and long neck and legs.

**ALBERTOSAURUS
SKULL***Albertosaurus* sp.

A predator and close relative of *Tyrannosaurus rex*, *Albertosaurus* grew to 8 m (26 ft) in length and is found in Late Cretaceous rocks.

strong,
serrated teeth

**PLATEOSAURUS
SKULL***Plateosaurus* sp.

A bulky plant-eater from the Late Triassic, *Plateosaurus* grew to about 8 m (26 ft) in length and had a very small head.

bony spike

**COMPSOGNATHUS
SKELETON***Compsognathus longipes*

An active predator, *Compsognathus* could probably move at speed. It was only 1.5 m (5 ft) long and is found in Late Jurassic rocks.

long tail
used for
balance

long hind legs
for running
fast

small brain cavity

**DASPLETOSAURUS JAW***Daspletosaurus torosus*

This Cretaceous dinosaur had massive hind legs and small arms, and it grew to a length of 9 m (30 ft). It had a powerful jaw with the formidable teeth of a carnivore.
