

FLOWERS

Fresh or dried flowers and petals are often used in tisanes because they add color and flavor to the mix. Many also have anti-inflammatory and detoxifying properties, so contribute much more than just visual appeal to the drink.

CHAMOMILE

(*Matricaria chamomilla*)

A low-lying, daisy-like flower, chamomile will flourish even in gravel, or grow through cracks in the sidewalk. Used to treat insomnia and anxiety because of its mild sedative qualities, chamomile is an immune booster as well as a relaxant. Chamomile's pleasing pineapple aroma contributes to its calming effect.

Chamomile

ELDERFLOWER

(*Sambucus nigra*)

These white umbrella-shaped flower clusters grow on the elder shrub and bloom during the month of May. Known for their anti-inflammatory properties, the flowers are dried and used in infusions to detox the body and fight cold and flu symptoms. Sweet and fragrant, it makes a tasty addition to tisanes.

HIBISCUS

(*Hibiscus sabdariffa*)

Hibiscus is a common ingredient in herbal tisanes because it adds a deep red color and a tart flavor. It contains anthocyanin, an organic compound that adds pigment to red and purple-colored fruits and vegetables. Studies suggest that hibiscus may help to treat high blood pressure and maintain healthy levels of cholesterol. Hibiscus flowers also contain quercetin, an anti-inflammatory, which is good for digestive health and relieving the symptoms of arthritis.
