

TEA BALL INFUSERS

These come in many forms, ranging from the classic ball, to a host of novelty shapes. Most hook onto the sides of mugs or teapots. All do the job well, but some inhibit the leaves from expanding, so make sure there is enough room in the infuser, and do not fill it to the brim with dry leaves.

MUGS WITH STAINLESS STEEL MESH INFUSERS

Mug infusers are relatively easy to clean after use, so they are ideal for infusing tea without too much fuss. They function quite well, giving the leaves lots of room to deliver their flavor. Those with lids offer the best infusion because they preserve the aromas released by the leaves.

VARIABLE TEMPERATURE KETTLES

These easy-to-use kettles have accurate temperature settings for each type of tea; simply select the tea type and press the button. Others have temperature settings, so it is necessary to know the optimal temperature for each type of tea (see pp42–47). Some models even allow you to infuse the leaves in the kettle.
