

Flowers grow in summer sunshine.

Summer Sun

Winter Sun

High and low

The seasons occur because the amount of sunlight reaching you varies. In summer, you will see that the Sun is much higher than in winter. This means that your part of the Earth is tilting toward the Sun.

Summer

The Sun is high in the sky at noon, and days are long and warm. Hot weather may be broken by thunderstorms.

Fall

During fall, the nights get longer and cooler again. Mornings are often misty. Sometimes they are frosty.

Fall usually brings mists.

Winter sleep

Many animals, such as dormice, sleep away the winter to save energy. This is called hibernation.
