

If the day starts sunny with few clouds,
the temperature soon starts to rise.

The Sun is high
in the sky.

Short trails of
condensation are
left by the aircraft.

"Heat-haze" is
made when dust
and pollution are
trapped near
ground level.

A hot, dry day

On a hot day, if the air is dry and calm, there are no clouds in the sky. Hot, humid weather is more unpleasant, because water vapor in the air makes us feel sticky and uncomfortable.
