

AUTOMOTIVES

Touch controllers for large and curved car displays

Automakers are enhancing in-car experiences with smart cockpits using OLEDs and microLEDs. However, thinner stack-ups and increased touch electrodes challenge capacitive sensing. Microchip Technology's ATMX23072M1 and ATMX2496M1 touchscreen controllers address this, supporting up to 162 touch channels for large, curved, and free-form displays. These controllers improve touch signal-to-noise ratio by +15dB, ensure secure OTA updates via SHA-512 authentication, and enable ultra-low-latency haptic control with shape event trigger and PWM, enhancing automotive HMI performance.

Battery protection IC

ABLIC has introduced the S-19161A/B IC, enabling automotive manufacturers to reduce backup power system size. Operating at 125°C, it replaces multiple nickel hydride batteries with

traditional costs. Designed for industrial applications like construction, surveying, agriculture, rail, mining, and maritime, it also supports UAVs, robotics, smart cities, and VR. With built-in security and seamless integration into new or existing products, it streamlines positioning functions, offering an upgrade path for users of previous ZED modules.

Commercial series MLCCs

Vishay Intertechnology, Inc. has

a single lithium battery. Designed for lithium-ion and polymer battery packs, it enhances protection for e-Call systems, TCUs, smart keys, and backup power. With a wide -40°C to 125°C range, it features advanced overcurrent and overcharge protection.

TVS diodes for EV battery management

Littelfuse, Inc. introduces the TPSMB-L series automotive TVS diodes for 800V EV battery management systems (BMS). These diodes offer ultra-low clamping voltage (Vcl) to protect analogue front end (AFE) and battery management ICs (BMICs) from voltage spikes. Compliant with ISO-26262 and AEC-Q101 qualified, they ensure high-voltage system reliability. With 600W peak pulse power and fast ESD protection, they support 14- to 20-cell BMS configurations, making them ideal for advanced EV architectures requiring robust safety and performance.

launched the VJ...W1HV high voltage MLCC commercial series for high-voltage applications. Ideal for energy, industrial automation, consumer electronics, telecom, and medical sectors, they support applications like power tools, motor drives, and instrumentation. Featuring BME technology and dry sheet processing, they ensure cost efficiency, high reliability, and RoHS compliance while offering voltages up to 3000V DC.

Portable SSD

Lexar has launched the ARMOR 700 Portable SSD in India, offering durability and high-speed storage for professionals. With read/write speeds up to 2000MB/s, it supports photographers, videographers, and content creators. It features IP66-rated water and dust resistance, a 3-metre drop-proof design, and thermal control for stable performance. Supporting Apple ProRes and 4K 60FPS on iPhone 15 Pro, it works across multiple devices.

EMBEDDED

20W DC/DC converters

RECOM's RPA20-FR series offers high-efficiency 20W DC/DC converters for rugged rail and industrial applications. Designed for demanding environments, they support a wide 36V DC-160V DC input range and operate from -40°C to 70°C (up to 105°C with derating).

5G IoT module

Cavli Wireless introduces the CQM200, a 5G NR Sub-6 cellular IoT module for high-speed, data-intensive applications. Built on the Qualcomm SDX72 chipset with a Quad-Core ARM Cortex A55 processor, it delivers up to 3.7Gbps download and 2.5Gbps upload speeds. Supporting 3x Carrier aggregation, eSIM, and GNSS, it ensures reliable connectivity for industrial automation, smart surveillance, and autonomous vehicles.
