CHEMICAL SPILL TURNS LAKE RED

Following an explosion at Bander Chemical Factory last night, toxic chemicals were released into the air. Lake Bander, which provides water for the factory, was turned red by the chemicals, which were carried into the lake by last night's rain.

Thousands of fish were killed, local farmers' crops were destroyed, and this morning the entire Bander area was declared a disaster area. The CEO of Bander Chemicals apologized for the leak and said the company was

doing everything possible to clean the lake and surrounding countryside. Local farmer John Hawkins said, "My business was ruined last night. I just hope Bander Chemicals will help us now."

What happened to the chemicals last night?

The chemicals were released into the air.

- 1 What happened to Lake Bander?

- 2 How did the chemicals get into the lake?
