Rats have a sense of smell that is **so** well developed that they can **detect** traces of TB in test **samples** given by humans. They signify when they smell TB by rubbing their legs together and are then given a treat through a syringe. There are a number of reasons why this is **such** an important breakthrough. First, the rats are able to spot the **disease** in its early stages, which is so much better than testing later because then treatment can be started right away on any patients who have tested positive. TB is **treatable** if it is detected in its early stages. If left undetected, it can be **deadly**. Second, rats only take 30 minutes to test nearly 100 samples. This is **so much** more efficient than human laboratory **testing**, which can take up to four days to do the same number. Finally, using rats is so much cheaper than buying expensive devices and paying a lot of money per test. This is important because TB is still a global concern. The situation in Mozambique was so bad **that** TB was declared a national emergency in 2006. By 2014, 60,000 people were said, by the ministry of health, to be **infected**.

The Space Race produced two truly iconic moments in **the** history of humankind. The first happened on April 12, 1961, when Yuri Gagarin became **the** first human in space. The entire Vostok 1 mission, including one orbit around Earth, lasted only 1 hour 29 minutes. Gagarin's voyage changed how people all over **the** world thought about **[-]** space. Just over eight years later in July, 1969, **[-]** Neil Armstrong, "Buzz" Aldrin, and Michael Collins traveled to space in **the** Apollo 11 space craft. On July 20 1969, Armstrong stepped onto **the** Moon's dusty surface. What he actually said next is **an** interesting story in itself. For many years he argued that he said, "That's one small step for a man, one giant leap for mankind." After listening to repeated transmission recordings, however, he admitted that he may have dropped the indefinite article "**a**." Either way, it was **a** huge step for mankind.
