Inductive sensor

Infineon's XENSIV TLE4802SC16-S0000 inductive sensor delivers accu-

rate torque and angle sensing for automotive chassis systems, without needing magnetic shielding. The

sensor has built-in cybersecurity and protection features. Compact, halogen-free, and RoHS-compliant, it simplifies system design while boosting safety, reliability, and future-ready scalability.

650V IGBTs

Magnachip's latest 6th-gen 650V IGBTs are tailored for solar inverters, offering high efficiency and extreme durability.

The MBQ40T65S6F-HTH cuts conduction loss by 25% for 15kW

systems, while the MBQ40T65S6FSTH reduces switching loss by 15% for 3kW setups. Built with robust polyimide insulation and fast-recovery diodes, these IGBTs deliver up to 15% energy gains, ensuring long-lasting performance in harsh, high-temperature environments.

Memory

Built on Samsung Foundry technology, Netsol's STT-MRAM merges

SRAM speed with flash memory-like persistence, eliminating the need for batteries. It is suitable

for use in smart meters, HMIs, PLCs, and banking applications. Available in densities ranging from 1Mb to 64Mb,

with serial/parallel interfaces, it operates on 1.8V or 3.3V. STT-MRAM offers a robust, ECC-free upgrade over flash, nvSRAM, or FeRAM in embedded designs.

ESD diodes

Nexperia has unveiled the industry's first ESD diodes, purpose-built for 48V automotive data lines.

With VRWM ratings of up to 72V and ultra-low capacitance of 3.4pF,

they ensure signal integrity even at high data rates, making them suitable for protecting CAN-FD, LIN, and FlexRay protocols in modern EV and HEV architectures.

Power chip

Nordic Semiconductor's new nPM1304 PMIC is designed for next-generation wearables, such as smart rings and fit-

ness bands. It integrates a linear charger, buck converters, LED drivers, and an ultra-low-power

fuel gauge that consumes just 8µA in active mode, and zero in sleep mode. Designed for Nordic's nRF SoCs, it cuts board space and power loss. It is a tiny powerhouse for compact, battery-run designs.

Infrared sensor

Phlux Technology has expanded its Aura APD series with a 30µm avalanche photodiode, engineered for

1550nm IR applications. Offering ultra-low capacitance and cut-off frequencies up

to 3.5GHz, it boosts sensitivity by 12x over standard InGaAs APDs. Suitable for OTDR, FSO, and fibre sensing, it delivers extended range and reduced

power needs.

RF components

Qorvo expands its 5G portfolio with the QPQ3550 BAW filter and QPA9862

pre-driver amplifier, tailored for mMIMO and FWA systems.

The QPQ3550 enhances CBRS band filtering with low insertion loss in a compact footprint, suitable for CPEs and small cells. Together, they streamline radio design, cut system cost, and accelerate high-performance 5G deployments.

Laser driver IC

Silanna Semiconductor's SL2002 laser driver IC delivers over 1000W of peak

pulses with up to 86% efficiency, enabling powerful

rangefinding from a 3V battery without the need for external boost circuitry. With fewer components and a smaller footprint, the SL2002 reduces BOM costs, extends battery life, and accelerates the development of compact 3D mapping, optical, and sensing systems.

Sensor module

Xsens has unveiled the Avior IMU, a compact 35.2g sensor module deliv-

ering high precision in a 36.8mm × 40mm footprint. Engineered for flexible integration, it supports UART, CAN,

SPI, I²C, RS232, and RS422. From AMRs and drones to marine robotics and control systems, Avior empowers scalable designs across industries with next-gen stability and low-noise performance.
