Compact DC/DC converters

Traco Power's new TEC 6UI series of compact DC/DC converters brings

higher efficiency and flexibility to industrial, instrumentation, and communication systems. Designed for

harsh or fluctuating power environments, it offers full protection features, remote on/off control, and rugged -40°C to +80°C operation for dependable embedded power design.

Motor control SoC

Infineon Technologies has broadened its MOTIX 32-bit motor control SoC range

with the TLE994x and TLE995x series, built for small to medium automotive

motors. They target key vehicle functions, from battery cooling pumps and fans to seat and window controls, offering efficient FOC operation, diagnostics, and enhanced safety integration.

Optical Ethernet PHY transceivers

Microchip's new optical Ethernet PHY transceivers extend secure, high-speed connectivity across long industrial and campus networks. Supporting 1Gbps

to 25Gbps over fibre links up to 10km, they eliminate repeaters while ensuring precise synchronisation, vital

for robotics, telecom, and automation. The devices secure data against cyber threats, enabling reliable, long-distance networking for factories, data centres, and connected infrastructure.

Planar transformers

Avionics, defence, and space power systems can now achieve higher density and reliability with Vishay's SGTPL-28 series planar transformers. They sim-

plify compact converter designs for mission-critical applications requiring rugged, customisable power performance.

Vishay Intertechnology

Microcontrollers

Renesas extends its RA8 series with 1GHz Cortex-M85-based RA8M2 and RA8D2 microcontrollers for industrial, IoT, and AI-driven systems. Featuring MRAM for fast, durable data storage, the devices handle real-time control,

HMI, and vision processing with dual Gigabit Ethernet, ML acceleration, and

integrated graphics engines. Built on a 22nm process, they enable compact, high-efficiency designs for robotics, automation, and connected edge platforms.

ASFETs

Nexperia's new 80V and 100V ASFETs, PSMN1R9-80SSJ and PSMN2R3-100SSJ, enhance current balance in parallel MOSFET setups for 48V motor

drives, EV systems, and industrial equipment. With up to 50% lower current delta,

they improve thermal reliability without device matching. The LFPAK88-packaged devices offer low RDS(on), wide temperature operation, and simplified high-efficiency design for demanding electrified applications.

EMBEDDED

HMI touch panels

Display Visions has launched its EA

HMI touch panels designed to simplify PLC-based industrial automation. The panels enable direct Modbus RTU and

TCP connectivity to major PLC brands.

Engineers can quickly

design control interfaces using free drag-and-drop HMI Designer software, linking live data and touch actions, ideal for machinery, factory control systems, and outdoor automation requiring fast setup and clear visual feedback.

Display Visions

FPGA development board

Electronics designers hitting performance limits with microcontrollers can now explore parallel processing using

SHRIKE Lite, a low-cost FPGA development board from

Vicharak. Designed for hobbyists and experimenters, it combines a Renesas SLG47910V FPGA with a Raspberry Pi RP2040 microcontroller, linked through a 6-bit channel for cooperative task handling. It supports diverse embedded, automation, and learning applications without steep FPGA entry costs.

Secure microprocessors

Nuvoton's MA35D16AJ87C microprocessor targets space-limited industrial

systems needing both performance and security.

Ideal for factory automation, smart buildings, and energy systems, it features a Trusted Secure Island (TSI) for hardware-based protection, supporting IEC 62443 and CRA cybersecurity compliance.

Nuvoton

AI-Ready SBC

Developers under pressure to shrink product development cycles can now leverage Grinn's new GenioBoard,

a compact 87 × 56mm single-board computer designed for AI-ready embedded systems.
