

THE DASHBOARD

India's Electronics Output Slumps From April 2025 Peak

Electronics production in India saw sharp swings in 2025, rising 15% in April, slipping to 0% in July, and recovering to 1.9% in August. While China and South Korea maintained steady growth of 10.7% and 7.4%, respectively, India's uneven output highlighted fluctuating domestic demand and shifting global manufacturing patterns amid US-led reshoring and trade policy changes.
