

Microchip Graphics Suite – Next Generation GUI Tool

Shorten Development Time With One Tool Set for All Development Platforms

Microchip Graphics Suite (MGS) is the next generation of Graphical User Interface (GUI) tools. For the first time, developers can use the same Microchip GUI development tools to craft exquisite user interfaces for Linux®, RTOS and bare metal embedded systems. MGS extends the power of Microchip's industry-leading GUI development environment, with new advances that:

Key Features

- Reduce the need for multiple, expensive GUI development platforms
- Flatten the learning curve with one tool set for all platforms
- Easily connect and enable popular third-party and open-source development environments like Light and Versatile Graphics Library (LVGL)
- Reduce time to market with innovations that reduce the total number of design iterations, as well as the time per iteration
