AUTOMATION

Automatic Glue Dispenser

JB Instruments has launched the MARK-50 peristaltic dispenser, an electric

silicone liquid dispensing machine for automatic glue dispensing. It also supports integration with automation equipment through a standard-level signal input interface. The device is suitable for manufacturers and industries needing precise dispensing of adhesives or silicone liquids, including electronics, automotive, packaging, and medical device sectors, where consistent and efficient glue dispensing is essential.

MOVES

Electric Scooter

Greaves Electric Mobility Limited, a division of Greaves Cotton, has launched the Ampere Magnus Neo, an upgraded electric scooter with the tagline 'The Power of More.'

Designed to enhance the Magnus series, it combines eco-friendly travel with style, power, and affordability. Targeted at modern family riders, the Magnus Neo offers a certified 100km range, three riding modes, reverse assist, and a portable battery for convenience.

Automotive Chips

Texas Instruments (TI) has unveiled advanced automotive chips aimed at

improving safety and in-cabin experiences for vehicles across all categories. The AWRL6844 60GHz mmWave radar

sensor integrates key features like occupancy monitoring, child presence detection, and intrusion

detection, powered by edge AI for real-time decision-making. This sensor helps meet Euro NCAP safety standards.

Radar MMIC

Infineon's new radar MMIC BASIC CTRX8191F is a cutting-edge 28nm radar MMIC designed for automated and autonomous driving. Its flexibility supports segmentation, tracking, and operation in harsh environments, even detecting breathing and heartbeat. The device's digital PLL generates complex waveforms with a sub-1µs flyback time, enabling cascaded configurations to reduce costs.

High-Voltage EV IC

Power Integrations has developed the 1700V-rated InnoSwitch 3-AQ flyback

switcher IC for 800V automotive systems. The IC uses a silicon carbide (SiC) primary switch to deliver up to 80W output power, ideal for next-gen electric vehicle bus voltages. With integrated protection mechanisms and over 90% efficiency, this IC targets automotive applications.

Automotive LED Driver

Diodes Incorporated has launched the

AL8866Q, an automotive-compliant LED driver designed for high-power LED systems.

The AL8866Q also features integrated soft-start, overvoltage protection, and

thermal shutdown, ensuring reliable performance in harsh automotive environments.

MISCELLANEOUS

Lightweight Smart Glasses

Ambiq and ThinkAR have unveiled AiLens, lightweight smart glasses

weighing 37 grams with over 10 hours of battery life, surpassing industry norms.

AiLens excels in healthcare, productivity, e-commerce, navigation, and education with real-time translation, task management, and wearable health data integration.

Graphics Cards

Intel has unveiled the Intel Arc B series graphics cards, code-named Battlemage, introducing the Arc B580 and B570 GPUs tailored for gamers prioritising performance and value. The B580 and B570 offer 12GB and 10GB memory, respectively, and excel in 1440p ultra-quality gaming, with AI-driven upscaling boosting frame rates by up to 3.9x.

AI Advisor

ASUS has launched its AI Advisor tool for select motherboard series, integrating advanced AI to enhance user experience. Powered by generative AI, it accesses extensive manuals and support documents to deliver accurate, real-time assistance. Unlike traditional bots, it offers tailored advice, from optimising gaming performance to technical configurations.
