

speaker manufacturers seeking compact, high-performance audio solutions. Sycamore requires less back volume,

provides mid-bass performance similar to legacy drivers with up

to 11dB more sub-bass extension, and increases high-frequency sound output by up to 15dB above 5kHz.

Memory interface chipset for 2nd Gen DDR5 MRDIMMs

Renesas Electronics Corporation has launched complete memory interface chipset solutions for second-generation DDR5 multi-capacity rank dual in-line memory modules (MRDIMMs). The MRDIMMs are designed to meet the memory bandwidth demands of AI, high-performance compute, and data

centre applications, offering operating speeds up to 12,800 mega transfers per second, a 1.35x improvement over first-generation solutions. The RRG50120 second-generation MRCD is used in MRDIMMs to buffer the command/address bus, and chip selects, and clocks between the host controller and DRAMs.

SWIR image sensor for machine vision and robotics

TriEye has launched the TES200 1.3MP SWIR image sensor. Operating within the 700nm to 1650nm wavelength range, the sensor offers 1.3MP resolution. The image sensor is designed for machine vision and robotics applications, featuring SWIR pixel and packaging technologies. The SWIR image sensor is designed for use by companies in the automotive,

industrial, robotics, and biometrics industries. Automotive manufacturers can use it for driver assistance systems

and autonomous vehicles, while industrial companies can apply it for quality control and

monitoring in manufacturing. Robotics developers can integrate the sensor into navigation, object detection, and manipulation systems, and biometrics systems can leverage it for facial recognition and identity verification.

Linear Hall effect IC for general use

ABLIC has launched the S-5611A linear Hall effect IC for general-use devices. The product supports adopting renewable energy sources like solar and wind power, focusing on improving energy efficiency to reduce environmental impact. It provides a 1.25μs response time, improving energy conversion efficiency in general-purpose inverters. The IC suits

energy-efficient applications, including renewable energy systems and industrial machinery. The applications of the IC include core current sensors to help measure current flow; linear position detection to enable position sensing in industrial and automation systems; and rotation detection for monitoring of rotational movement in motors, robotics, and other mechanical systems.

7th Gen MXT LV MOSFETs

Magnachip Semiconductor Corporation has launched 7th generation MXT LV MOSFETs. The MOSFETs offer low RSS(on) by reducing the channel

length between the source and drain during on-state operation. This improves battery performance, efficiency, and battery life and reduces overheating.

The MOSFETs are manufactured using

a 100μm-thin wafer-level chip scale package (WLCSP), offering greater design flexibility. This makes them suitable for various mobile devices, including smartphones, smartwatches, wireless

earphones, and next-generation ring-shaped devices. Additionally, they are applicable in battery-powered devices like e-bikes, scooters, e-cigarettes, and drones. They can also interest companies in the consumer electronics, automotive, and wearable technology sectors.

New connectivity modules for IoT applications

Qualcomm has launched two new connectivity modules for the Internet of Things: the QCC730M and QCC74xM. The company states that the QCC74xM is the first device to support host-free independent operation, utilising a core

based on the open source RISC-V instruction set archi-

ture. It is suitable for battery-powered IoT applications like IP cameras, sensing devices, and smart locks. This module is also ideal for IoT hubs, hotspots, and smart home applications, with multimedia capabilities and CAN and Ethernet interfaces. Both modules are pre-certified to streamline development and reduce time to market. Embedded systems engineers can use the modules' hostless operation or external host integration for real-time applications requiring media handling, security, and multitasking.
