

Hioki ideal solution for data centers

If data center companies do not use the Hioki POWER QUALITY ANALYZER, they may face increased downtime, higher maintenance costs, difficulty in detecting power quality issues, and challenges in performing long-term recording and seamless data analysis, ultimately impacting business operations and revenue

PQ3198

PQ3100

Several key features

- 1 Comprehensive Data Analysis:** Equipped with advanced features, the PQ3198 / PQ3100 captures a wide range of power quality parameters with high accuracy, providing detailed insights and long-term data storage for up to a year.
- 2 Unmatched Power Quality Monitoring:** The PQ3198 /PQ3100 is designed to seamlessly record and analyze power supply issues, ensuring optimal performance and reliability in your data centre. Say goodbye to power disturbances and hello to uninterrupted operations!
- 3 User-Friendly Interface:** The intuitive design of the PQ3198 /PQ3100 makes it easy for operators to navigate and use, eliminating the need for a dedicated sensor power. Simplify your power quality monitoring processes today!
- 4 Advanced Troubleshooting:** With the PQ3198 /PQ3100 quickly identify and resolve power quality issues, preventing potential data loss and downtime. Ensure your data centre runs smoothly and efficiently!
