

Automotive current monitors

Diodes Incorporated has launched the ZXCT18xQ series, a set of current monitors designed for automotive systems.

These monitors can measure changes in

current across a range of voltages, making them suitable for applica-

tions like controlling lights, managing batteries, and operating heated seats. They are useful for systems that need fast fault detection. The company claims that the electronics manufacturers, especially those designing automotive or consumer electronics, can benefit from its current sensing capabilities.

200V ultra junction MOSFETs

Littelfuse Inc. has expanded its 200V X4-Class Ultra Junction MOSFET lineup with the IXTN400N20X4 and

IXTN500N20X4. They offer double the current ratings and lower resistance than previ-

ous models, making them suitable for applications like battery storage systems, battery chargers, and power supplies.

Gate driver ICs for N-channel MOSFETs

Nexperia has launched a series of gate driver ICs that control both high-side and low-side N-channel MOSFETs in

systems like half-bridge or synchronous buck configurations. The NGD4300-Q100 is made for automotive uses like electronic power steering,

while the NGD4300 is for DC-DC converters in consumer electronics, servers, telecom, and industrial micro-inverters. These drivers help improve performance and reliability for automotive, industrial, and power electronics systems.

4W output converters

The RAC04NE-K series by RECOM provides 4W output from 100V AC to 277V AC without reducing power. It is made for environments and works

in building automation, lighting, telecommu-

nications, industrial equipment, and e-mobility applications. The converters have safety and EMC certifications and protect against overload, short-circuits, and over-voltage.

Surface-mount silicon carbide Schottky diodes

ROHM has launched surface-mount silicon carbide (SiC) Schottky barrier diodes (SBDs) optimised for enhanced insulation resistance by increasing

creepage distance to 5.1mm—1.3 times greater than standard designs. These

diodes, available in 650V and 1200V ratings, target applications like automotive onboard chargers, DC-DC converters, industrial robots, PV inverters, and UPS systems. These diodes meet automotive standards, supporting efficient, high-voltage, and high-speed switching needs in the growing EV and industrial markets.

Serial NOR flash memories

Alliance Memory has expanded its Serial NOR Flash product line with new 3.3V families offering 128Mb, 256Mb, and 512Mb memory densities.

Ideal for embedded systems,

IoT, consumer

electronics, and industrial applications, these devices deliver high-performance code storage and execution. With power supply lock-down, OTP

protection, and high bandwidth for read, program, and erase operations, they ensure reliability for applications like servers, routers, smart home devices, medical systems, and automotive controllers.

Aluminium polymer solid capacitors

Panasonic Industry Europe has expanded its OS-CON aluminium polymer solid capacitor range with the SXV, SXE, and SVPG series, targeting industrial applications. These capacitors serve manufacturers of

power supplies, solar inverters, measurement

equipment, servers, and data centres, where low ESR and high ripple current are essential. The SVPG series supports 20V-25V, delivers 5000-hour endurance at 105°C, and excels in high-ripple power circuits, making it ideal for automation, AI accelerators, and data centres.

EMBEDDED

Development board for embedded AI and IoT

Vajravegha Mobility Pvt Ltd has launched the Vajravolt IoT development board for embedded AI and IoT applications. It caters to engineers, developers, and organisations working

in industrial automation, data acquisition, and edge computing.

Powered by the 32-bit

ESP32-S3 controller, it integrates 4G, Ethernet, Wi-Fi, and Bluetooth connectivity, along with RTC, RS485/RS232, and relay outputs. With built-in functionalities, it simplifies development, accelerates prototyping, and supports the 'Make in India' initiative, making it a versatile tech solution for
