FPGA Ethernet sensor bridge

Microchip Technology's PolarFire FPGA Ethernet sensor bridge empowers developers to create AI-driven sensor processing systems, seamlessly integrating with Nvidia Holoscan for efficient, real-time data handling. This low-power solution

supports high-bandwidth sensor data transfer over Ethernet, enabling

edge AI applications across medical, industrial, automotive, and aerospace industries. It offers multi-protocol sensor compatibility for applications like medical imaging, industrial automation, and automotive systems.

Industrial mini-ITX motherboards

ADLINK Technology Inc. has introduced the AmITX series of Mini-ITX motherboards designed for industrial use. These motherboards have Intel

processors, ranging from Intel N97 to 12th, 13th, and 14th Gen Intel Core processors, making them suitable for smart cities, manufacturing, and healthcare.

SMARC module

The IBASE RM-N8MPL SMARC 2.1 module, powered by the NXP i.MX

8M Plus QuadLite Cortex-A53 processor, delivers robust performance for

industrial IoT, AI systems, and smart displays. Designed for harsh environments,

with shock and vibration resistance, it ensures seamless software integration, offering reliable, scalable solutions for modern industrial applications.

Industrial AC/DC power supplies

Traco Power has introduced the TXN Series of AC/DC power supplies for industrial use. These power supplies work in a wide temperature range

and are designed for safety with isolation between inputs and outputs. They replace

older models and are easy to install with a metal case and screw terminal block. They cool themselves up to 200W without extra cooling parts. The power supplies are suitable for global use and meet safety standards.

MANUFACTURING EQUIPMENT

Multi-line, modular inspection platform

GÖPEL electronic's multi-line platform is a modular, advanced inspection

system for electronics manufacturing. It supports solder paste inspection (SPI), automated

optical inspection for SMT and THT, and conformal coat inspection (CCI).

For SMT, optional double-sided inspection enhances efficiency, while SPI systems enable closed-loop feedback with printers. CCI systems utilise UV LEDs and telecentric optics for high-contrast, dual-sided coating inspection, improving precision and productivity.

TEST & MEASUREMENT

Multipurpose oscilloscope

Rohde & Schwarz has released the R&S RTB 2, an upgraded version of the R&S RTB2000 oscilloscope. The oscilloscope supports different protocols like I2C, SPI, UART, and CAN/

LIN, making it useful for testing and troubleshooting. It combines many

tools into one, such as an oscilloscope, logic analyser, and waveform generator. It is good for engineers, students, and hobbyists working in small spaces. It has extra features like password protection and remote control, making it useful in classrooms and labs.

PXIe embedded controller

Pickering Interfaces UK, has released a new PXIe embedded controller (43-920-002) that offers twice the processing

power of the previous model. It is a single-slot controller designed for testing and measuring

tasks that need high data speeds. The controller has an Intel Xeon processor, 64GB memory, and a 2TB storage drive. It can transfer data at speeds of up to 28GB/s and supports
