India Wearable Device Market Shrinks 21% in 3Q24

India's wearable device market shrank 20.7% YoY to 38 million units in 3Q24, driven by fewer new launches and conservative inventory management. The average selling price rose 1.3%. Smartwatches dropped 44.8%, and earwear fell 7.5%. Brand-wise, Boult and realme grew, while Oppo declined by 46.7%. Despite the slump, TWS earwear gained a 73.2% market share. The smart ring market grew, with 92,000 units shipped. However, shipments from long-tail brands dropped 59.1%.

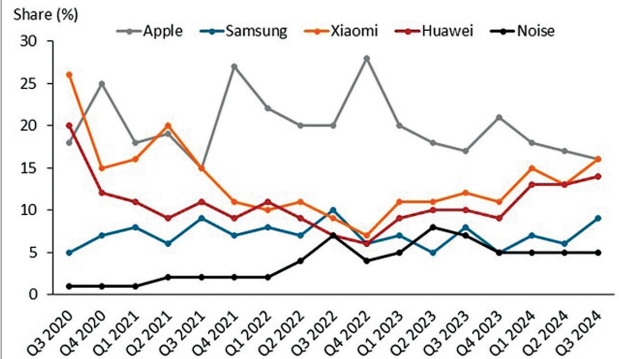

Product Category	3Q 2023 Shipments (thousands of units)	3Q 2024 Shipments (thousands of units)	Year-over-Year Unit Change
Wrist Band	108.8	56.1	-48.4%
Smartwatch	16,923.0	9338.6	-44.8%
Earwear	30,828.6	28,515.4	-7.5%
Others*	65.0	94.9	46.0%
Total	47,925.3	38,005.1	-20.7%

*Includes Smart Rings and Smart Glasses

Global Wearable Shipments Rise 3%, With Xiaomi Leading in 3Q24

Global wearable band shipments grew just 3% YoY in 3Q24, reaching 52.9 million units. Basic bands rose 7% to 10.4 million units, driven by Xiaomi's Mi Band 9 and Samsung's Galaxy Fit3. Basic watches grew 3%, while smartwatches dominated the market despite a slight 0.1% shipment increase. Xiaomi (37.3% increase) and Apple tied for the highest share at 8.5 million units each. Regional growth was strongest in Latin America and EMEA, while North America saw declines.

AI Demand Fuels 27% YoY Revenue Rise in Semiconductor Foundries in 3Q24

The global semiconductor foundry industry saw a 27% YoY and 11% QoQ revenue growth in 3Q24, driven by strong AI demand and China's recovery. TSMC's market share rose to 64%, fueled by N5 and N3 nodes. SMIC's utilisation rate crossed 90%, while Samsung and GlobalFoundries maintained their positions, with 12% and 6% market share respectively. Mature-node foundries, especially in China, are expanding, intensifying competition.

Industry Predicts Slower Growth for 2025 Chip Market

Ending Q3 and Q4 2024 on an optimistic note, the global chip market is forecasted to record slower growth of 6-16% in 2025. Among the key drivers, AI-based server growth will slow to 11%, down from 42% in 2024. The smartphones and PCs sector will see a modest increase in the low single digits of 2% and 4.3%, respectively, while the automotive industry will experience a slight recovery with 1.8% growth. The industry attributes these changes to weaker AI demand and overall market challenges.
