1 BatteryOK's EV DOCTOR: AI DEVICE TRANSFORMING GLOBAL BATTERY DIAGNOSTICS

Founded in 2019 by Shubham Mishra and Ajay Vashisht, the company introduced EV Doctor. This game-changing solution improves battery performance, longevity, and safety while addressing key challenges in the global EV market.

BatteryOK Technologies, an Ahmedabad-based startup, transforms battery diagnostics in the electric vehicle (EV) industry with cutting-edge artificial intelligence (AI). Shubham Mishra, drawing on his experience at Gensol, the parent company of BluSmart cabs, and his master's degree in energy infrastructure, identified a gap in the market for reliable and efficient battery testing methods. He observed that dealers often relied on rudimentary techniques, such as manually touching battery surfaces to identify faults, which needed to be more accurate and efficient. He founded BatteryOK to harness AI to solve battery diagnostic challenges.

Initially, BatteryOK focused on building e-bikes. However, challenges arising from the Covid-19 pandemic and difficulties in marketing and business development prompted the company to pivot its focus. Under the mentorship of industry experts such as Dr Judith Jeevarajan, a former NASA battery safety head, BatteryOK concentrated on battery technology. They

developed algorithms and AI models to create EV Doctor, a portable device intended to provide rapid diagnostics of lithium-ion batteries at various stages of their lifecycle.

EV Doctor replaces bulky, time-consuming testing equipment with a compact 300-gram device. It connects to the battery and charger,

completing diagnostics in about 15 minutes. The device measures voltage, current, and time, transmitting this data to cloud-based algorithms that perform fault detection, DC internal resistance computation, and voltage-current profiling. It supports non-CAN and CAN-based batteries up to 100 volts and 100Ah.

According to the company, EV Doctor provides accuracy exceeding 96.7% in assessing battery health, safety, performance, and faults.

BatteryOK revised its business model so that EV Doctor could reach a broader market. Initially priced at ₹30,000 plus GST, the company introduced a revenue model enabling garages and service centres to acquire the device for ₹10,000. Users pay a fee per test, allowing dealers to offer diagnostics to customers while creating a recurring revenue stream for BatteryOK. This approach lowers the barrier to entry for service providers and promotes wider adoption of battery diagnostic tools.

BatteryOK has deployed over 1500 units of EV Doctor and serves more than 1000
