

clients worldwide, including countries such as South Korea, Mauritius, Mexico, and various regions in Europe. Their clientele includes companies like Jitendra EV, White Carbon, Zypp, Yulu, MG Motors, and JioBP. This global presence highlights the rising demand for reliable battery diagnostics in the expanding EV sector.

The company's leadership includes co-founder and CTO Ajay Vashisht, who previously worked at the Defence Research and Development Organisation (DRDO) developing missile power systems. The advisory board features Kashi Vishwanathan, who is associated with Tesla India, and Dr Judith Jeevarajan. BatteryOK also receives mentorship from industry figures such as Sanjeev Bikhchandani, founder of Naukri.com, and Sridhar Vembu, founder of Zoho, providing strategic guidance and industry insights.

BatteryOK has been entirely bootstrapped, with the founders emphasising customer revenue over external funding and reinvesting earnings to fuel growth. This approach reflects their strategy to maintain profitability and focus on long-term value creation. The operational model aligns with a broader trend among

At Battery India Expo, Delhi

startups prioritising sustainable growth over rapid scaling through external investments.

Facing industry challenges, they recognise the need for more stringent testing protocols and increased government support in

the EV sector. The company advocates for centralised systems to track battery quality and safety throughout their lifecycle, aiming to address issues such as the prevalence of unreliable testing equipment that can compromise battery diagnostics. They emphasise the importance of standardised practices to ensure safety and reliability in the EV industry.

Looking ahead, the company is developing a universal energy storage ecosystem to democratise battery performance, longevity, and safety. Utilising data from over 200,000 batteries, they aim to enhance performance and longevity, which could have significant implications for battery sustainability and cost-

effectiveness. Plans include equipping garages in India to be EV ready and ensuring customers have reliable access to servicing and repairs, a crucial step as the adoption of electric vehicles increases.

2 IoT BRIDGING THE GAP FROM FARM TO FRIDGE IN DAIRY INNOVATION

The company empowers dairy farmers with internet-free, on-site milk testing, ensuring fair pay. Engineered for India's harshest conditions, their device guarantees reliable performance.

In a city where tradition intersects with technology, Utkarsh Kapoor and Ramee Kachroo united over a shared vision to transform an industry. After years in the corporate world, they felt compelled to start their own venture. Drawing on Utkarsh's expertise in rural milk supply chains and Ramee's experience with grassroots projects, they

conceptualised a solution that set their journey in motion.

Their journey began with a vision: to enhance the dairy supply chain from its foundation. They imagined a technology capable of on-site milk quality testing, determining fat content and detecting adulterants within seconds, all without requiring internet connectivity. This

tool empowers farmers by ensuring fair compensation aligned with the quality of their milk.

Discussing the distinctiveness of their technology, Utkarsh explains, "When a farmer arrives to pour milk, it takes just about 40 seconds for the device to conduct an analysis. It evaluates the milk's fat content and screens for any impurities.
