voltages, ensuring reliability and continuous operation based on direct user feedback.”

The IoT device was designed and developed entirely in-house, from the PCB to the firmware. Every component, including sensors and any necessary modifications, has been crafted and

assembled by the team to ensure optimal performance. The company’s headquarters in Gurgaon doubles as their production facility, allowing them full control over the assembly process.

As a resource-constrained startup, Oright seeks government policy reforms to create a level playing field, accelerating growth and extending their innovations to grassroots levels. It is vital for the government to revise eligibility requirements for tenders, enabling startups to compete fairly and contribute advanced technologies to the dairy industry. Such

support is crucial to foster a thriving startup ecosystem.

Work on machine learning and artificial intelligence is advancing globally, and the company is keen to integrate these technologies into their supply chain, identifying this as their next area of focus.

Their competitive edge is strengthened by their ability to develop and produce hardware, firmware, and applications entirely in-house. This vertical integration enables them to respond swiftly to customer needs, providing a substantial market advantage.

The company aims to become one of the top two players in the dairy industry, consistently innovating and heavily investing in research and development to meet industry demands. They are also venturing into fintech solutions and creating a complete ecosystem for all stakeholders in the dairy supply chain. To achieve this, Oright is leveraging their strong community ties and farmer engagement. This strategic move positions them to become a leading force in the industry in the coming years.

3 WHATSAPP-BASED CHAT PLATFORM FOR EASY EV BOOKING, CHARGING, AND PAYMENTS

Trivandrum-based sparXcharge reduces EV users’ wait times at traditional charging stations and streamlines charging operations with real-time convenience and reliability.

Established in the last quarter of 2023 by Imthias Mohamed, Nezo Energy India LLP (NEZO)—operating under the brand name sparXcharge—is a mobile EV charging service provider currently focused on operations in Trivandrum, Kerala.

Imthias Mohamed, Founder

& CEO of sparXcharge, describes the startup’s innovative approach: mobile, battery-powered EV chargers that bring charging directly to customers, removing the need to visit fixed stations. With sparXcharge, vehicles equipped with robust chargers travel to the customer’s location, providing a convenient

solution. Through a ‘chat-based charging’ platform on WhatsApp, users can effortlessly book, charge, and pay, making EV charging more accessible and straightforward for various user groups.

The model significantly reduces EV users’ wait times at traditional charging stations and streamlines
