

The code can be developed in IDEs such as MicroPython, Arduino IDE, or similar. SnowCode has been used here to create the code for the device. As shown in Fig. 3, code blocks are joined. The board

Construction and testing

Once the code blocks are set (refer to Fig. 3), upload the code to the ESP32 board after selecting the correct COM port and board.

Power the device. Once powered, the LEDs will alternate in illumination, and the speaker will produce a sound mimicking a police siren. **E_{FY}**
