

Handheld analyser

Keysight's FieldFox D-Series handheld analyser tackles wideband signal capture challenges by enabling 120MHz gap-free IQ streaming and real-time recording, so that transient or overlapping RF events aren't missed in dense spectrum environments. Built-in 10 GbE transfer and replay support smooth lab back-analysis, and software-defined tools cover VNA, spectrum, EMI, and noise figure tests. It's designed for in-field telecom, aerospace, defence, and spectrum-monitoring applications. *Keysight Technologies, Inc.*

Power supply

Rohde & Schwarz's new R&S NGT3600 power supply simplifies high-power testing by combining up to 1800W per channel with very low noise and fine measurement resolution, addressing

standard bench limits for demanding DC tests. Channels can be linked to deliver higher voltage/current, helping engineers test power converters, EV systems, base-station electronics, satellites, renewable-energy inverters, and automotive 48V networks with stable, accurate power, and flexible configurations. *Rohde & Schwarz*

LCR-Reader-MPB

Siborg Systems' LCR-Reader-MPB brings benchtop-grade testing to a pocket-sized tool for engineers and technicians who need accurate measurements outside the lab. The compact device combines wide-range LCR measurement with AC/DC voltage, frequency, LED/diode tests, signal generation, oscilloscope mode, and analogue signature analysis to speed fault-finding and verification on dense PCBs and in the field. Bluetooth models add data

logging, BOM import, and PCB mapping to accelerate test workflows. *Siborg Systems Inc.*

USB4 v2.0 testing solution

Anritsu's USB4 v2.0 test solution is now certified to validate 80 Gbit/s high-speed links as device makers bring next-gen USB interfaces to market. The MP1900A Signal Quality Analyzer-R platform checks PAM3 signalling, jitter, noise

stress, and updated link-training behaviour required by the USB Implementers Forum for the latest USB4 standard. It supports development and compliance testing of USB4 v2 hosts, controllers, cables, and peripherals for high-resolution video, external GPUs, and fast storage applications. *Anritsu*

Multichannel AWG

Spectrum Instrumentation's DN6.63x multichannel AWG tackles complex high-speed signal generation challenges by packing up to 12 synchronised, ultra-low-noise channels in one unit, reducing test-bench clutter and cost. Covering DC–2.5GHz with precise 16-bit outputs and flexible replay modes, it supports demanding workflows in semiconductor testing, communications research, quantum experiments, and medical imaging, where multiple coherent signals are required simultaneously. *Spectrum Instrumentation*

MOVES

S-CORE middleware

Eclipse's open source S-CORE middleware is moving toward standardising safety-critical vehicle software with its 0.5-alpha release under the Eclipse Software Defined Vehicle Working Group. Designed as a common-core layer between the OS and automotive

applications, S-CORE helps developers manage deterministic execution, communication, and safety logic on high-performance ECUs. Backed by contributors such as

Qorix and others, it aims to eliminate redundant engineering and accelerate the development of ADAS, powertrain, and chassis functions in SDVs. *Qorix*

MISCELLANEOUS

Power-supply configuration tool

DigiKey has launched an online power-supply configuration tool that lets engineers quickly define outputs, voltage, and current specifications, and then order custom power modules assembled and shipped within days, cutting weeks off traditional design and sourcing cycles. Hosted on DigiKey's platform, with fast part selection and supply integration, it initially supports Vox Power's NEVO+ and VCCM series, streamlining power-stage design for embedded and system builders. *DigiKey*

Unified smart card

Infineon's SECORA Pay M platform combines payments and authentication on one smart card/device to tackle rising online fraud by closing gaps between legacy payment systems and weak identity checks. The unified card supports EMV-based Visa/Mastercard payments, as well as functions such as travel tickets, access passes, and FIDO authentication keys, simplifying secure logins and transactions. Tap-to-X capability also enables secure e-commerce and mobile wallet use, targeting banks, e-commerce, and identity-centric digital services. *Infineon Technologies India Pvt Ltd*
