Indian culture

A sneak peek into the coming year's tech trends can help you spot the opportunities and threats, and plan for success...

The forecasts are rolling out, and 2026 looks set to be another year headlined by AI. However, it is also clear that AI cannot continue its run without more processing power, reliable telecommunication, sustainability initiatives, renewable energy, and other supporting enablers. As a result, we are also going to see every tech sector upping its game in the coming year. Here is our take on the likely technology trends of 2026, based on research reports from trusted sources like Gartner, McKinsey, and Deloitte, alongside expert opinions shared through EFY magazine and industry conferences.

Artificial intelligence – more real than it sounds

- The focus is shifting from text-based large language models (LLMs), which function like conversational search engines, to AI agents that can understand, plan, decide, collaborate, and execute tasks autonomously! Deloitte predicts that the autonomous AI agent market could reach \$8.5 billion by 2026 and \$35 billion by 2030.
- Using disparate AI models for varied functions often
