Electronics Exports Defy Trade Pressures With 19.05% Growth In October 2025

India's merchandise exports slipped in October 2025 to US\$72.89 billion, down 0.68% YoY, while imports jumped 14.87% to US\$94.70 billion. The widening gap pushed the monthly trade deficit to US\$21.81 billion. Yet, exports of electronic goods surged 19.05%, cushioning the overall slowdown. Between April and October 2025, total exports stood at US\$491.80 billion, up 4.84%, while imports rose 5.74% to US\$569.95 billion.

India's Battery Demand Is Set For A 40-Fold Rise By 2048

India is on the brink of a US\$9 billion opportunity to develop a circular battery economy, as battery demand is projected to surge from 25GWh in 2026 to more than 1015GWh by 2048. By 2050, repurposing retired batteries could generate ₹587.38 billion in value and ₹195.76 billion in profit. With retired volumes expected to reach 800GWh, large-scale recycling could also help India avoid up to 2.9 million tonnes of carbon emissions.
