TECHNOLOGY

COMPONENTS

Microcontroller

Infineon's PSOC 4100T Plus microcontroller, built on the Arm Cortex-M0+ core, blends advanced analogue-digital

features with Multi-Sense technology. It supports capacitive, inductive, and liquid level sensing—including hover touch—for

versatile HMI and control applications. With strong ESD protection, low power use, and waterproofing, it simplifies touch designs while boosting reliability. Ideal for home appliances and outdoor electronics, it offers smooth multi-touch tracking across various surfaces—even through metal or air.

Chipset

MediaTek's new T930 chipset brings faster, smarter connectivity to 5G Fixed Wireless Access and mobile Wi-Fi devices. With enhanced signal cover-

age and AI gateway support, the T930 enables seamless edge AI experiences. Its integrated

modem, processor, and networking core ensure full-rate performance—ideal for smart homes, businesses, and evolving applications demanding speed, intelligence, and reliability.

Nano SMD fuse

Littelfuse's new Nano 2 415 SMD series fuse delivers high-interrupting

protection in a compact, surface-mount design. As a drop-in replacement for through-hole

fuses, it simplifies assembly, enabling automation, reducing labour, and boosting production speed. Ideal

for electronics, appliances, automotive, and industrial systems, it is a smart upgrade for space-constrained, high-performance applications.

Embedded controllers

Microchip's MEC175xB embedded controllers feature built-in, unchangeable post-quantum cryptography,

enabling developers to meet rising security standards set by CNSA 2.0. Powered by an

efficient Arm processor, they support real-time tasks while ensuring long-term protection. These controllers help system designers future-proof devices against evolving cybersecurity demands, without compromising performance, features, or power efficiency.

AC/DC power supplies

RECOM's new RAC20NE-K/277 series offers compact, high-efficiency AC/

DC power conversion for industrial and energy applications. With a wide input range and multiple voltage outputs, it fits tight spaces with both board-mount and open-frame models. Its flexible design and robust insulation ensure safety, making it ideal for modern energy systems.

AI microcontrollers

ROHM introduces its latest AI microcontrollers, designed for real-time fault prediction in devices such as

motors and appliances. Powered by Solist-AI and an ultra-fast accelerator, they enable fast, on-device anomaly detection. With low

power consumption, built-in motor control, and flexible integration, they enhance reliability and reduce downtime, making them ideal for predictive maintenance across industrial and residential applications.

Graphics processor

Renesas' new RZ/A3M microprocessor delivers responsive, high-quality graphics for next-gen HMIs in appliances,

industry, and healthcare. With built-in high-speed memory

and support for vivid LCD displays, it eliminates the need for external RAM, cutting costs and simplifying design. Powered by a fast Arm core and equipped with versatile interfaces, it easily integrates into compact boards.
