

AUTOMOTIVES

Embedded memory

STMicroelectronics' new Stellar with xMemory revolutionises automotive microcontrollers by integrating flexible, expandable embedded memory. This innovation streamlines the development of software-defined and electric vehicles, reducing costs and complexity. Using advanced phase change memory technology, it delivers superior performance and the smallest memory cell for automotive use.

4-channel digital isolators

Toshiba Electronics Europe GmbH introduces a new series of four-channel digital isolators, designed to meet the needs of modern automotive applications. Featuring advanced magnetic coupling technology, they deliver excellent noise immunity and fast data rates. Qualified for harsh hybrid and electric vehicle environments, they ensure safe and stable communication in safety-critical systems, such as chargers and battery management.

CMOS image sensors

Teledyne introduces space-qualified CMOS image sensors designed for new space missions. Manufactured and

tested in Europe, these flight-ready sensors offer unmatched reliability versus

standard COTS options. With advanced imaging features, radiation resilience, and compact, power-efficient designs, they excel in satellite payloads, star trackers, and lunar rovers.

High frequency inductors

TDK has expanded its MUQ0201022HA series of ultra-compact high-frequency inductors, now offering a broader range of inductance. About half the size of typical models, these components match the performance of larger counterparts, making them ideal for mobile and wearable

devices. Designed for tight spaces, they support advanced miniaturisation

without sacrificing efficiency, thanks to TDK's proprietary patterning and sintering technologies.

VIA isolation amplifiers

Vishay's new VIA isolation amplifiers deliver accurate, reliable signal measurement in tight spaces. Ideal for industrial, automotive, and medical use, they feature high thermal stability, low gain drift, and fast acquisition speeds.

Compact 10W DC/DC converters

TRACO Power's new TMR 10WIR series delivers reliable 10-watt DC/DC converters designed for demanding transportation and industrial applications. Featuring robust

metal casing and wide input voltage options, these converters ensure stable performance across harsh environments. Integrated protections simplify design and improve system safety.

Backed by a three-year warranty, this series supports demanding applications with trusted durability.

Voltage monitoring ICs

ABLIC Inc., a part of MinebeaMitsumi, introduces two new voltage monitoring

IC series for battery level displays that do not require micro-controllers. These ICs integrate multi-voltage

monitoring, reducing circuit size and power consumption. Features include selectable LED counts, power-saving enable pins, and sensing pins for high voltages, plus two LED display modes for clear battery status visualisation.

SSD controller

Phison's new E28 SSD controller, built on an advanced 6nm process,

integrates AI processing to boost system speed and efficiency.

Explicitly designed for AI workloads, it accelerates data handling and significantly reduces training time. Though aimed at AI servers, its speed improvements hint at a future leap in everyday PC and gaming storage responsiveness.

Module for AIoT connectivity

Fibocom's new L610-IN module offers advanced AIoT connectivity, tailored for India's IoT market. Designed for transportation, logistics, and smart city applications, it supports AIS140 standards and versatile interfaces.

Pin-compatible with Fibocom's LTE Cat.4 modules, it offers easy upgrades, supporting LTE, GSM, VoLTE HD voice, and multiple sensors for reliable
