EMBEDDED

12kW power supply unit

Navitas Semiconductor's new power supply unit (PSU) delivers high-

efficiency power tailored for AI-focused hyper-scale data centres.

Built to Open Rack v3 and OCP standards, it supports dense server setups with substantial power per rack. Compact and robust, it provides comprehensive protection and reliable cooling, making it ideal for demanding AI workloads.

High-performance computing SoM

The MYC-LMX91 System-on-Module (SoM) from MYIR features NXP's power-efficient i.MX 91 processor,

delivering compact, high-performance computing. Its pin compatibility with

existing MYIR modules enables easy design scaling without hardware changes. Ideal for embedded developers and OEMs, it supports rich peripherals and Linux OS, perfect for applications like industrial automation and smart home control.

Compact edge computing module

ADLINK Technology introduces the

COM-HPC-mMTL, a compact edge computing module featuring Intel Core Ultra architecture and diverse I/O

options. Designed for space-limited environments, it empowers developers in industrial

automation, UAVs, AI robotics, and medical devices. This scalable, stackable module redefines edge solutions, striking a balance between efficiency and versatility for demanding embedded applications.

Motion controller

Mitsubishi Electric's MELSEC MX controller provides ultra-fast, high-

precision motion control for advanced manufacturing applications. Ideal

for lithium-ion battery, semiconductor, and LCD production, it supports hundreds of axes with microsecond-level communication. User-friendly no-code programming, AI-driven debugging, robust cybersecurity, and digital twin compatibility make it perfect for smart factories' evolving needs.

GPUs and AI accelerators

Intel unveils a new lineup of powerful GPUs and AI accelerators designed

for professionals and developers. Alongside, scalable Gaudi AI accelerators support enterprise AI inference with flexible formats. Additionally, the

AI Assistant Builder on GitHub enables developers to create custom AI agents optimised for Intel hardware, streamlining AI deployment across various industries.

MANUFACTURING EQUIPMENT & MATERIALS

UV curable hot melt adhesives

Toyochem's new TOYOMELT P-201 series introduces a breakthrough in adhesive technology. These UV-

curable hot melt adhesives cure instantly, boosting production speed without

drying time. They resist heat beyond 100 degrees Celsius, reliably bonding metals like steel and aluminium in harsh environments. Solvent-free and eco-friendly, they provide a cost-effective and flexible alternative to traditional adhesives. Perfect for electronics and automotive industries, the series delivers strong, durable bonds while supporting sustainability goals.

Protective fluid for soldering nozzles

The EO-NOZZLE-PROTECT from Emil Otto GmbH protects soldering nozzles by forming a durable, colourless

film that prevents oxidation, corrosion, and dross buildup.

This barrier supports smooth, precise solder flow, enhancing joint quality and reducing
